PART - A.

①.

①. health is a science & art of preventing and promoting life in the environmental.

②.

4 non communicable diseases.

* Vector born (fly, bee, air)

* Vehicle born (Food, water)

* Cancer

* diabetes

* Accidents

③.

4 health care delivery indicators

* Promoting health education

* Surveillance of disease

* Policy & medical research

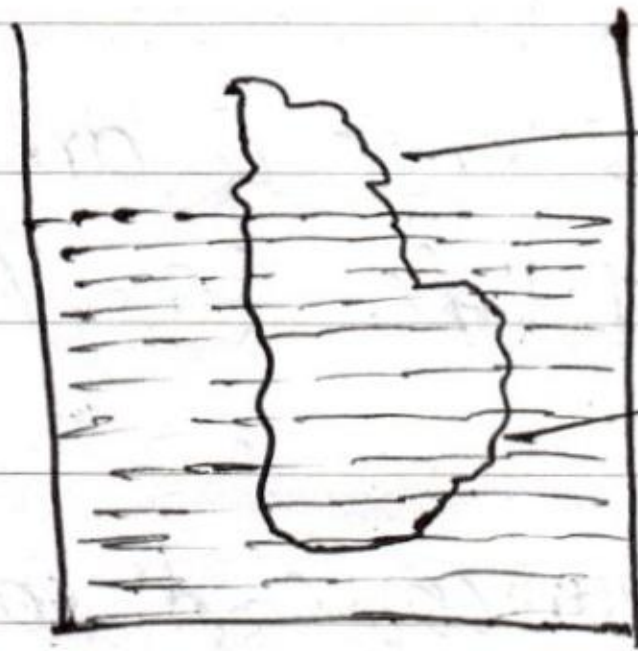

* Assess them with good care.

④.

Spectrum health health is a proper education to every people then only some spectrum of health physical, medical, well being in the society.

Part-B.

③ Iceberg phenomenon.

→ Disease outside of human

→ Disease ~~in~~ inside of human
-bodyIntroduction:

* Iceberg phenomenon means. it is a states of the human body how much he is suffer from the disease which shows little types of symptoms outside. but the larger amount of the disease is present in his body.

⇒ When the human is suffering from the particular disease he didn't get more symptom from out side. but he has lot of disease present in his inner body.

⇒ The person who is suffering from the cancer at the first stage or

At the his second stage. he didn't get more symptoms but in his inner body the cancer is growing in the large amount

* Then once he become in the final stage he got to now that he is suffering from the cancer becz now he get started symptoms like hair loss, cell, illness, etc after that he now it is in the large wide spread to the body.

* Conclusion:-

The Iceberg phenomenon indicate that how that ~~water~~ ^{iceberg} is covered by ~~the~~ water in the human body also some nutrient get stop showing the symptoms out side becz of the power which is got of nutrient food to the human body but once it get low in the human body then the symptom get start to show the symptom out side the human body.

HA Difference b/w eradication & elimination

* Eradication of disease.

⇒ The disease which is eradication in the local area & nation area but the little symptoms are present & they can replace again in the geographical area & again get more disease from that is called eradication of disease.

Example for eradication: Polio, T.B (tuber - clousie), HIV.

* elimination of disease

⇒ The disease which is elimination of the geographical area and they can't spread any type of symptoms to human in the geographic area and world wide that disease are called elimination of disease.

Example for elimination: Elephant leg, Small pox,

levels of health care.

① Primary health care

② Secondary healthcare

③ Tertiary healthcare

* Primary health care: When the disease still not at born in the human body but he get little of symptoms we should make fast recovery is called primary health care.

* Secondary health care: When the disease has taken place in the human body and he got symptoms & disease effect we should make the human early diagnose & make the disease cure is called Secondary health care.

* Tertiary health care: When the disease has full cover to the human body & the human not care take of the disease it can spread more faster to the body and it take's to the last stage of the human.

- body then there is no treatment for the human who is suffering from the disease but at that last stage medical diagnosis can't work to the human body but he can take the medicine for short time is called tertiary health care.

WHO theme 2025

Definition: The WHO is a giving service to the people & where there is more emergency time and they give free service to the people & they WHO is started after World War 2 and they have one policy that every human being should get proper medical care in this world. And the glory of the

* WHO: World Health Organisation

* Theme that WHO is started. Every one should get proper medical treatment & proper facility in the hospital's.

* WHO is a support of the medical & every scheme or any rule that will pass by WHO in medical field. and they have prepared the some hospital stage & give proper effect to the every hospital stage.

Example: PHC, CHC, Family welfare, Hospital.

* This all hospital are under covered by the WHO and they give proper rules and police to that hospital & they also make staffing pattern to the every hospital.

* In 2025 WHO theme that is everyone should get free treatment in Govt hospital & everyone should get well in easy clinical method.

Conclusion:- WHO (World Health Organization) is a suffering system to the medical & people who is suffering from financial system. It help the lot to everyone.

Part- C

(10A) Disease Prevention

* The modes of interventions in disease prevention are:

① * Finding the disease who it has spread
* Finding the host who is suffering from the disease

* Surveillance to the particular geographical area where the disease spread

* Then we should should prevent the disease

⇒ When the disease has got birth from any Agent in the environment first we should start taking precaution and making every one to get read educate that diseases and they can also prevent the disease.

- * In case the disease didn't get cure in the geographical area and it started to spread then we should do more precautions to the environment and start to identify the disease who it has spread & from which human it is spread we should get do now.
- * Then after we surviving from the human who got disease & he is spreading the disease in the geographical area we should make the person quarantine & give him proper nutrient food in the quarantine.
- * After we knowing that we should again make surveillance over the person who is suffering from disease. While he going in the geographical area we should check every people there because that disease can spread to one person to another person so we should make surveillance & get some sample from everyone get to laboratory find out again is disease

Spread or not.

* After we get every reports we should again that particular area and make surveillance and we should give them proper medical education to avoid for that disease.

* When at the end the area is covered by disease it can stop to spread disease because here no people are suffering from disease they are in the quarantine so there is no disease spread in the area.

* After every thing we should take care of the persons who is suffering from the particular disease again we should take the sample of the human suffer for disease when we got the report normal. we should give proper medical education and send them to their particular place.

- * Conclusion There is only 3 steps to prevent the disease in normal way that is
 - * Identify the person who is suffering for disease
 - * Find the treatment for the disease
 - * Give a proper education to them & cure for the particular disease.

(12A) Different modes of disease transmission

- * Direct transmission
- * Indirect transmission

⇒ Direct transmission - Where disease can directly transmission by the person to person or any thing transmission easily.

- * Vector born (Flies, etc)
- * Vehicle born (Food, Water)
- * Air born (by the flies)

* When the person who can directly transmission the disease by person to person or person to animal they can get some disease like Explain: dog bite (rabies), or sexual transmission

-tion, etc it can harm the person soon and it can't stop to person transmission

* Because there is Direct transmission it get very early transmits to the person who suffering from peridical disease he can spread by his droplets, by his sweat, or his sexual process so it is unstopable to control the disease.

* The that person get to now that I am suffering to the peridical disease it spreading one person to another person he should take proper precaution and make some distance & get medical checkup in proper method after that direct transmission can stop.

* Indirect transmission

The disease which person got but it can't effect to any one because it is no symptoms to the disease and it can't harm any

- person.

Ex - diabetes, Accidents, hair fall, cancer.

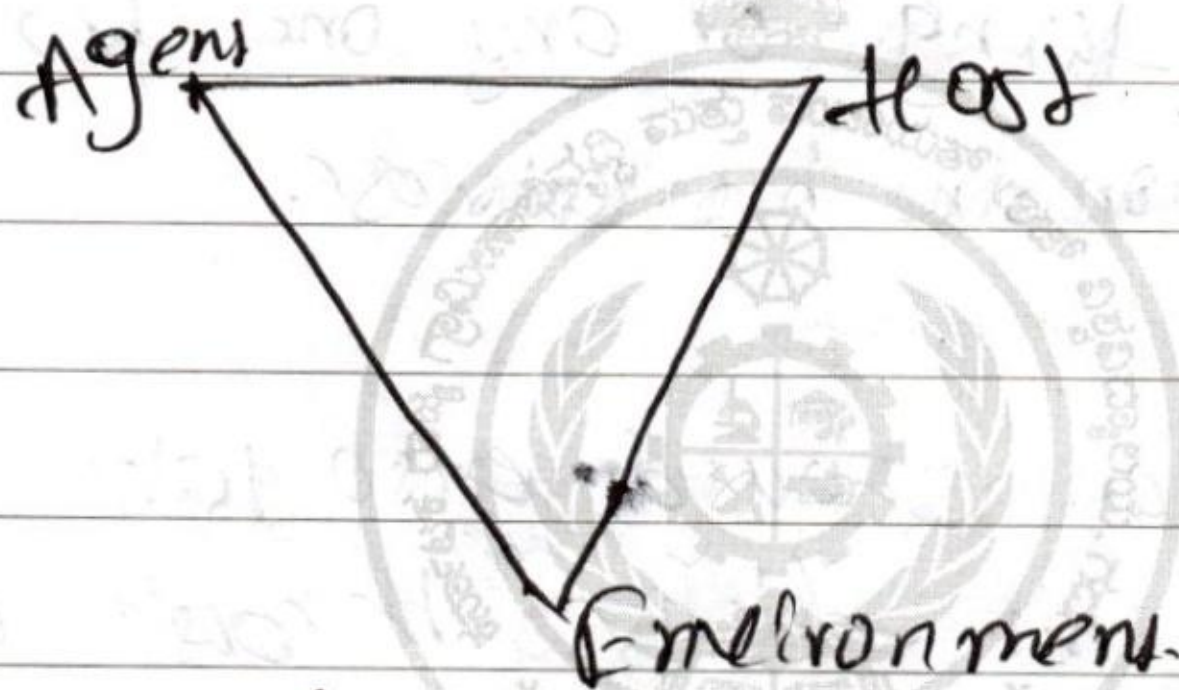

* Because that indirect transmission disease can't spread to person to person because it has no active symptoms and the person who is suffering from disease he can be freely and he can be use any thing of any one because it has no transmission in his disease.

* The person should also take medical check up for his disease because if his health imp it may harm to him very badly because the person who has diabetes he can suffer a lot when he get any injury it can't get speed recovery because he has diabetes and lack a nutrient who the injury strike him he may get illness and he can't move any normal activity in his life so the person who is suffering from indirect disease he should get proper medical check and he should follow the doctor report daily.

Qn) natural history of disease

* Pre-pathogenes
* Pathogenes

⇒ Pre-pathogenes: The disease not arrived to the human body is called pre-pathogenes.

(By knowing or unknowning we make Agent & Host to get & get disease).

⇒ Pathogenes: The disease arrived to the human body is called pathogenes. & there are some steps to prevent the disease in the human body.

Pathogenes cure steps

Death

This are the steps which ^{human} disease can be prevented by the disease is every steps.

⇒ When the man cause or the death the disease he can be take some prevention by the step of the curance.

History of the disease curance

① Assentile days by the magic or prayer or people

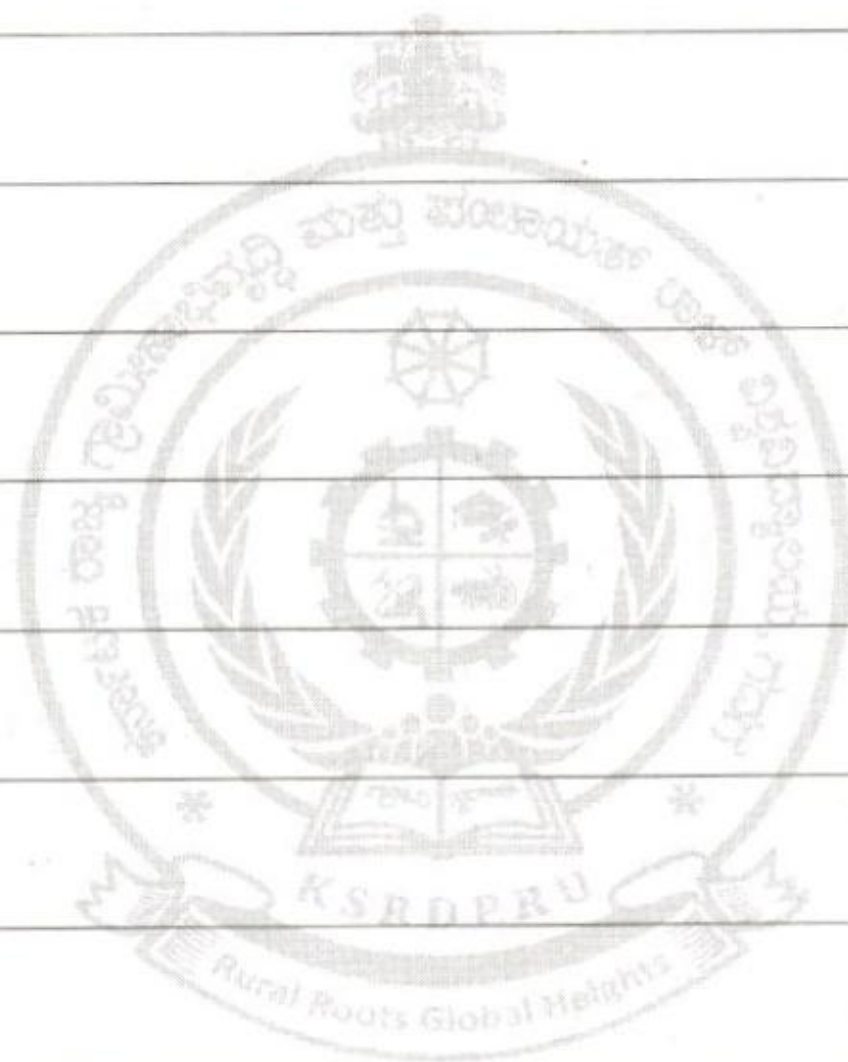

Part A

- * Greeks in Greek day they know how hygiene maintain
- * Middays get medical education more & give treatment
- * 19th century making tablets & recover a people
- * 20 century got everything & giving proper medical treatment
- * 21 century There is only preventing every one form to disease.
