

INSTRUCTIONS TO CANDIDATES

1. **IMPORTANT** : CANDIDATES TO NOTE THAT ADDITIONAL SHEETS WILL NOT BE SUPPLIED AND CANDIDATES TO WRITE THEIR ANSWERS JUDICIOUSLY. CANDIDATES TO WRITE THEIR REGISTRATION NUMBER IN SPECIFIED SPACE ON FRONT PAGE ONLY. WRITING NUMBER OR NAME IN ANY OTHER PART OR MAKING SPECIFIC MARKS IS TREATED AS DELIBERATE ATTEMPT TO INFLUENCE EXAMINER AND WILL BE DEALT SERIOUSLY AS PER UNIVERSITY RULES(MALPRACTICE IN EXAMINATION).
2. Write on both sides. Do not write in the margin space.
3. Enter all details with Registration No., Programme, Semester etc. in the front page and do not write anything in any other space. Registration No. should be written legibly and shade the Corresponding circle in the OMR clearly with black/blue ball pen.
4. Candidates are required to put their signature and left hand thumb impression in the specified places.
5. No sheet shall be torn of from the answer-book provided, if any page is spoiled/damaged, put a line across it.
6. Do not leave any blank page between your answers. Answers written beyond blank pages may not be assessed, if by accident a page is left blank write on it "P.T.O" in bold letters.
7. At the end of the examination, answer-book whether written or blank, must be handed over to the Room Superintendent.
8. Nothing shall be written on the question paper or the blotting paper.
9. See that the answer-book supplied to you bear the signature of the Room Superintendent and date.
10. Write the question numbers (specifying the sub question, if any) in the margin and leave sufficient space after completion of answer to each question.
11. Exchange of writing materials, Communicating with other students, is strictly prohibited.
12. You will not be permitted to leave the examination hall until half an hour after the question papers are distributed.
13. During the last thirty minutes, you will not be allowed to leave the hall.
14. A Candidate is liable to be expelled from the examination hall and his/her case will be reported to the Registrar / Concerned officer of the University, if he / she
 - (i) Brings any book, notes, mobiles any electronic instruments etc., into the examination hall,
 - (ii) Speaks to or communicates in any other way with any other candidate while the examination is going on,
 - (iii) Or takes with him/her any answer-book written or blank or Question Papers, while leaving the examination hall during examination,
 - (iv) If found giving or receiving assistance, or copying from any paper book or notes or allowing any other candidates to copy from his/her answer book etc.
 - (v) Writes either on blotting paper or any other paper clues or points which might possibly be of help to any other candidates during the examination,
 - (vi) Uses or attempts to use in any other unfair means like smuggling in any other answer-book written outside or found guilty of impersonation,

PART-A.

①.

g. Endemic

⇒ En: In

demia: people.

Endemic means the disease which spread to particular person in small area is called Endemic.
-ic. Ex: Cough, Fever.

* Epidemic

Epi: All

demia: people

Epidemic means the disease which spread to group of people or the particular city is called Epidemic. Ex: T.B, AIDS

* Pandemic

Pan: Everywhere

demia: people

Pandemic means the disease which spread to the whole world is called Epidemic pandemic.

Ex: Covid-19, plague.

(a) Epidemiology means a study of the Agent, host, environment which is related to the health of people and disease formed.

(b) Incidence means the disease which is going to spread by any chance to human body.

* Prevalence means the disease is spread everywhere and we should take proper precaution is called prevalence.

(c) Risk factors the disease which spread to everyone & it is getting danger to health is called Risk factors
Ex: Covid-19, Plague.

(d) Case Fatality Rate means the disease when added to people and they are known as Case Fatality Rate.

PART-B

(7A) Carrier mean the person who carries the disease and spread to the environment & person to person is called carrier.

* Classify carriers: There are some carriers who use to spread the disease by carrying in environmental place.

* Human carrier: The person who carries the disease & move one place to another place and spread every where the disease which is carries.
Ex: Covid-19.

* Aerial born: The disease which is carries by the air or any object & soil that consist of disease.
Ex: Cough, Fever.

* Vector born: The disease carries by the flybee or any living organism that make contaminating in food & water.
Ex: loose motion, vomiting.

* Droplets: When the person who carries the disease when he uses to cough or sneezing the saliva gland the droplets will move to another person & there they use to get disease.
Ex: sneezing, fever.

* Skin infection: The person who uses to wear another person dress which the person was infected by skin infection but he didn't take treatment then the person who wore his dress automatically he can also infect to the skin infection & carry to everywhere.

Conclusion: The carrier means in the environmental area & the geographical area the person who carries the disease and spread in the environment it can effect to the whole geographical area and the disease can't get cured as soon as possible so some are carriers are most danger so we should take advance pre-caution in our daily life.

6A) herd immunity

Introduction : herd immunity is a that which ~~carries~~ carries herd immunity from his parent - It given & what ~~he~~ ~~go~~ the person get good health or not.

* Herd immunity is a source which is got by the parents ~~to~~ and the proper immunity when ~~he~~ ~~to~~ the person was born and when the person grow he can now to get how the herd immunity present in the his body

* Herd immunity is a one type of helping to our body power work or more active in the work. Herd immunity we get by some proper nutrition food & hygiene maintaining in the proper life style.

* ~~Her~~ Herd immunity is a system which avoid foreign body, so active in the human body then immunity we fight with them and keep body in controlling.

* Some times herd immunity can't get proper bec as the mother nutrition level is low then baby may be in a disability part. So in the pregnancy time should take more care of the mother & child nutrition and immunity.

* herd immunity can be given to mother when she has pregnancy period with good nutrition food and some little work activity then the herd immunity will transfer to the baby system by the process of placenta while taking care of the baby in the mother stomach.

* herd immunity will transfer every generation person to person or animal to animal in there some thing will be similar to baby.

Ex: hairs, face, eyes, ears some organs are similar to the parents.

Conclusion:- herd immunity is a transference from the - genetic to genetic which is normal or baby to mother herd or father herd immunity common to baby.

QA determinants of health

Introduction The determinants of health play a main role in the environmental & the human disease & it take prevention steps to stop disease transmission in the environmental area.

* The determinants of health which make a main role play in the society & environmental that take precaution step to prevent the disease and stop spreading in the environmental area.

* In determinants health we go study & some particular step how to stop the disease & how to prevent the people who are getting effect by the disease.

* In determinants of health there are some steps.

- ⇒ Spectrum of Health
- ⇒ Environmental of Health
- ⇒ Social Health
- ⇒ Mental health
- ⇒ Physical health.

* Spectrum of Health: that means the disease we should now & analysis why is that disease why to stop it to in environment area.

* Social Health: that means where group of people standing in the society or in particular we should make some distance be2 any infection or disease droplet can't move to us.

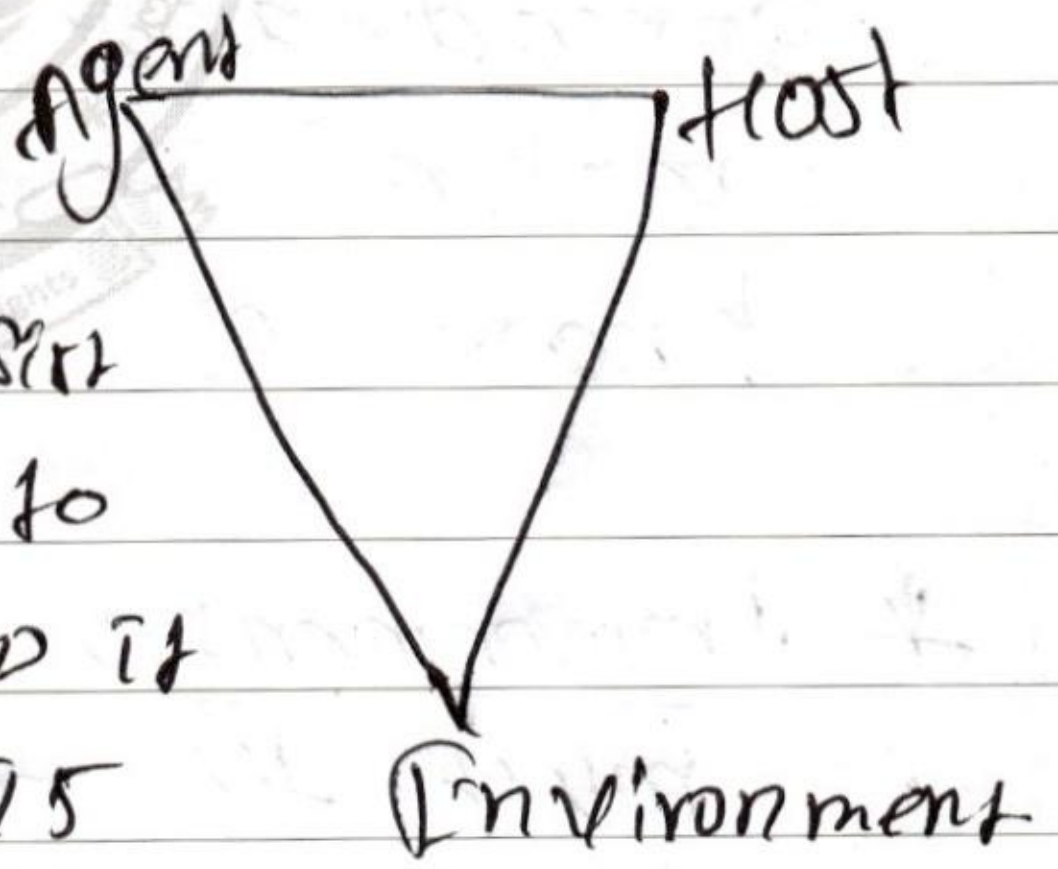

* Mental Health: in the environmental area the person should mental healthy be2 he can sense everything. or he is mentally absent means he can't make proper connection in environment.

* Physical health: When the person physical fit & stable he can live but the person may and adapt can't walls mean in the society he can get some less opportunity.

* Conclusion: The determinants of health can provide good thing & it take main role to keep disease away from the environment.

(2A) The epidemiologic triad with suitable example.

Introduction: The mainly epidemiologic triad consist of 3 step that are to identify the disease, how it arrived, & from who it is transforming & how much it is spread to environment.

* The epidemiologic triad mainly consist of 3 step Agent, Host, environment & now they added one more Time to spread.

* Agent:

Agent means that particular disease how it arrives to the environmental area from which living organism it is entered to the environment from people or animal or small bacteria to now that we call Agent.

* Host:

Host means the person who carries the disease & signs & symptoms in the environmental area and spreading to everyone by transmission in the environment is ~~to~~ known as Host.

* Environment: In the environment how much the disease is spread and how it is spreading from whom it is spreading to now and get identity we should surveillance in the environment & after we can get that.

* Time

This 4th step added now a day to check the particular disease who how it is spreading either fast or slow so. we can get to know in which particular time and how much time it take to spread to human body or any living organism.

Example: Covid-19, First it has entered to the environment & after spread by the help of host & when host started travelling the disease also started spreading more in the environmental area after that scientist going to know much time it will take to spread in the human body to get active in the human body.

Conclusion: The Epidemiologic triad is mainly to work as how the disease spread & from it is spread how much it take time to spread in the geographical area. it know as epidemiologic triad.

PART-C

(12A) The natural history of disease & levels of prevention.

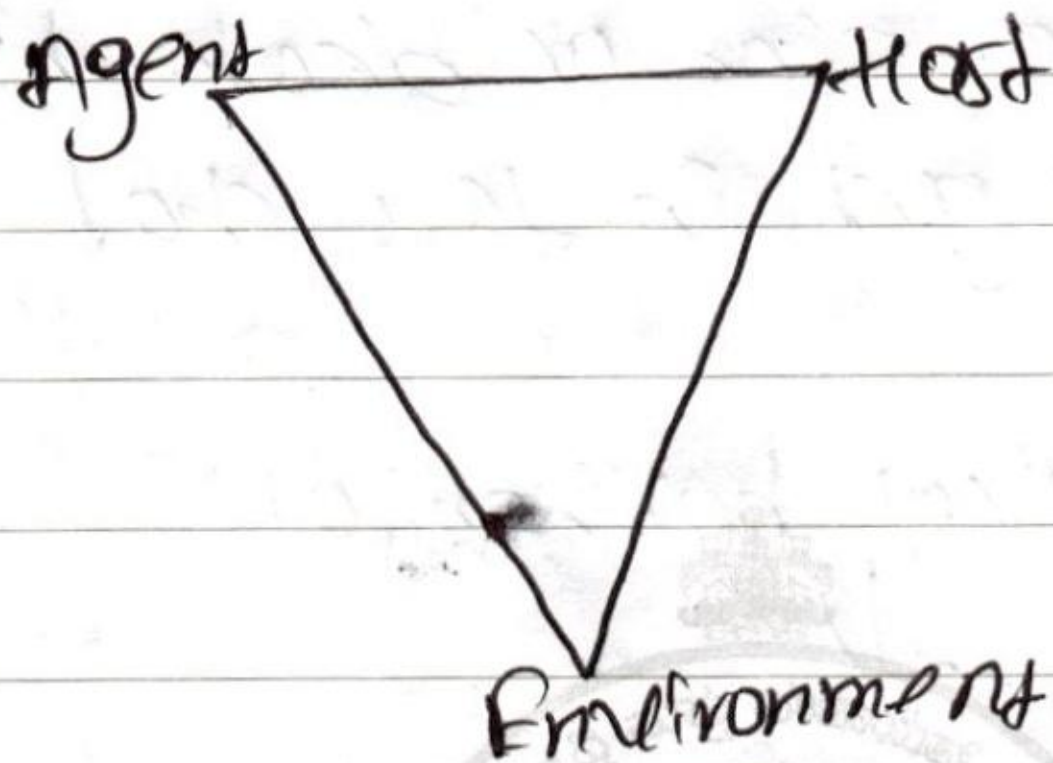

Introduction: The natural history going to analysis the disease or any sign & symptom which occurs in the environment area.

* The natural history going to make two part of the environment. When the natural history make pre-patogen & pathogen means the person who is involved to disease & the person who is still not involve to disease is known as pre-patogen & pathogen.

* When the natural history find the out the disease & make the main step to prevent the person by the particular disease & getting him well.

* Pre-pathogenesis

The man how still didn't involve to the disease or virus.

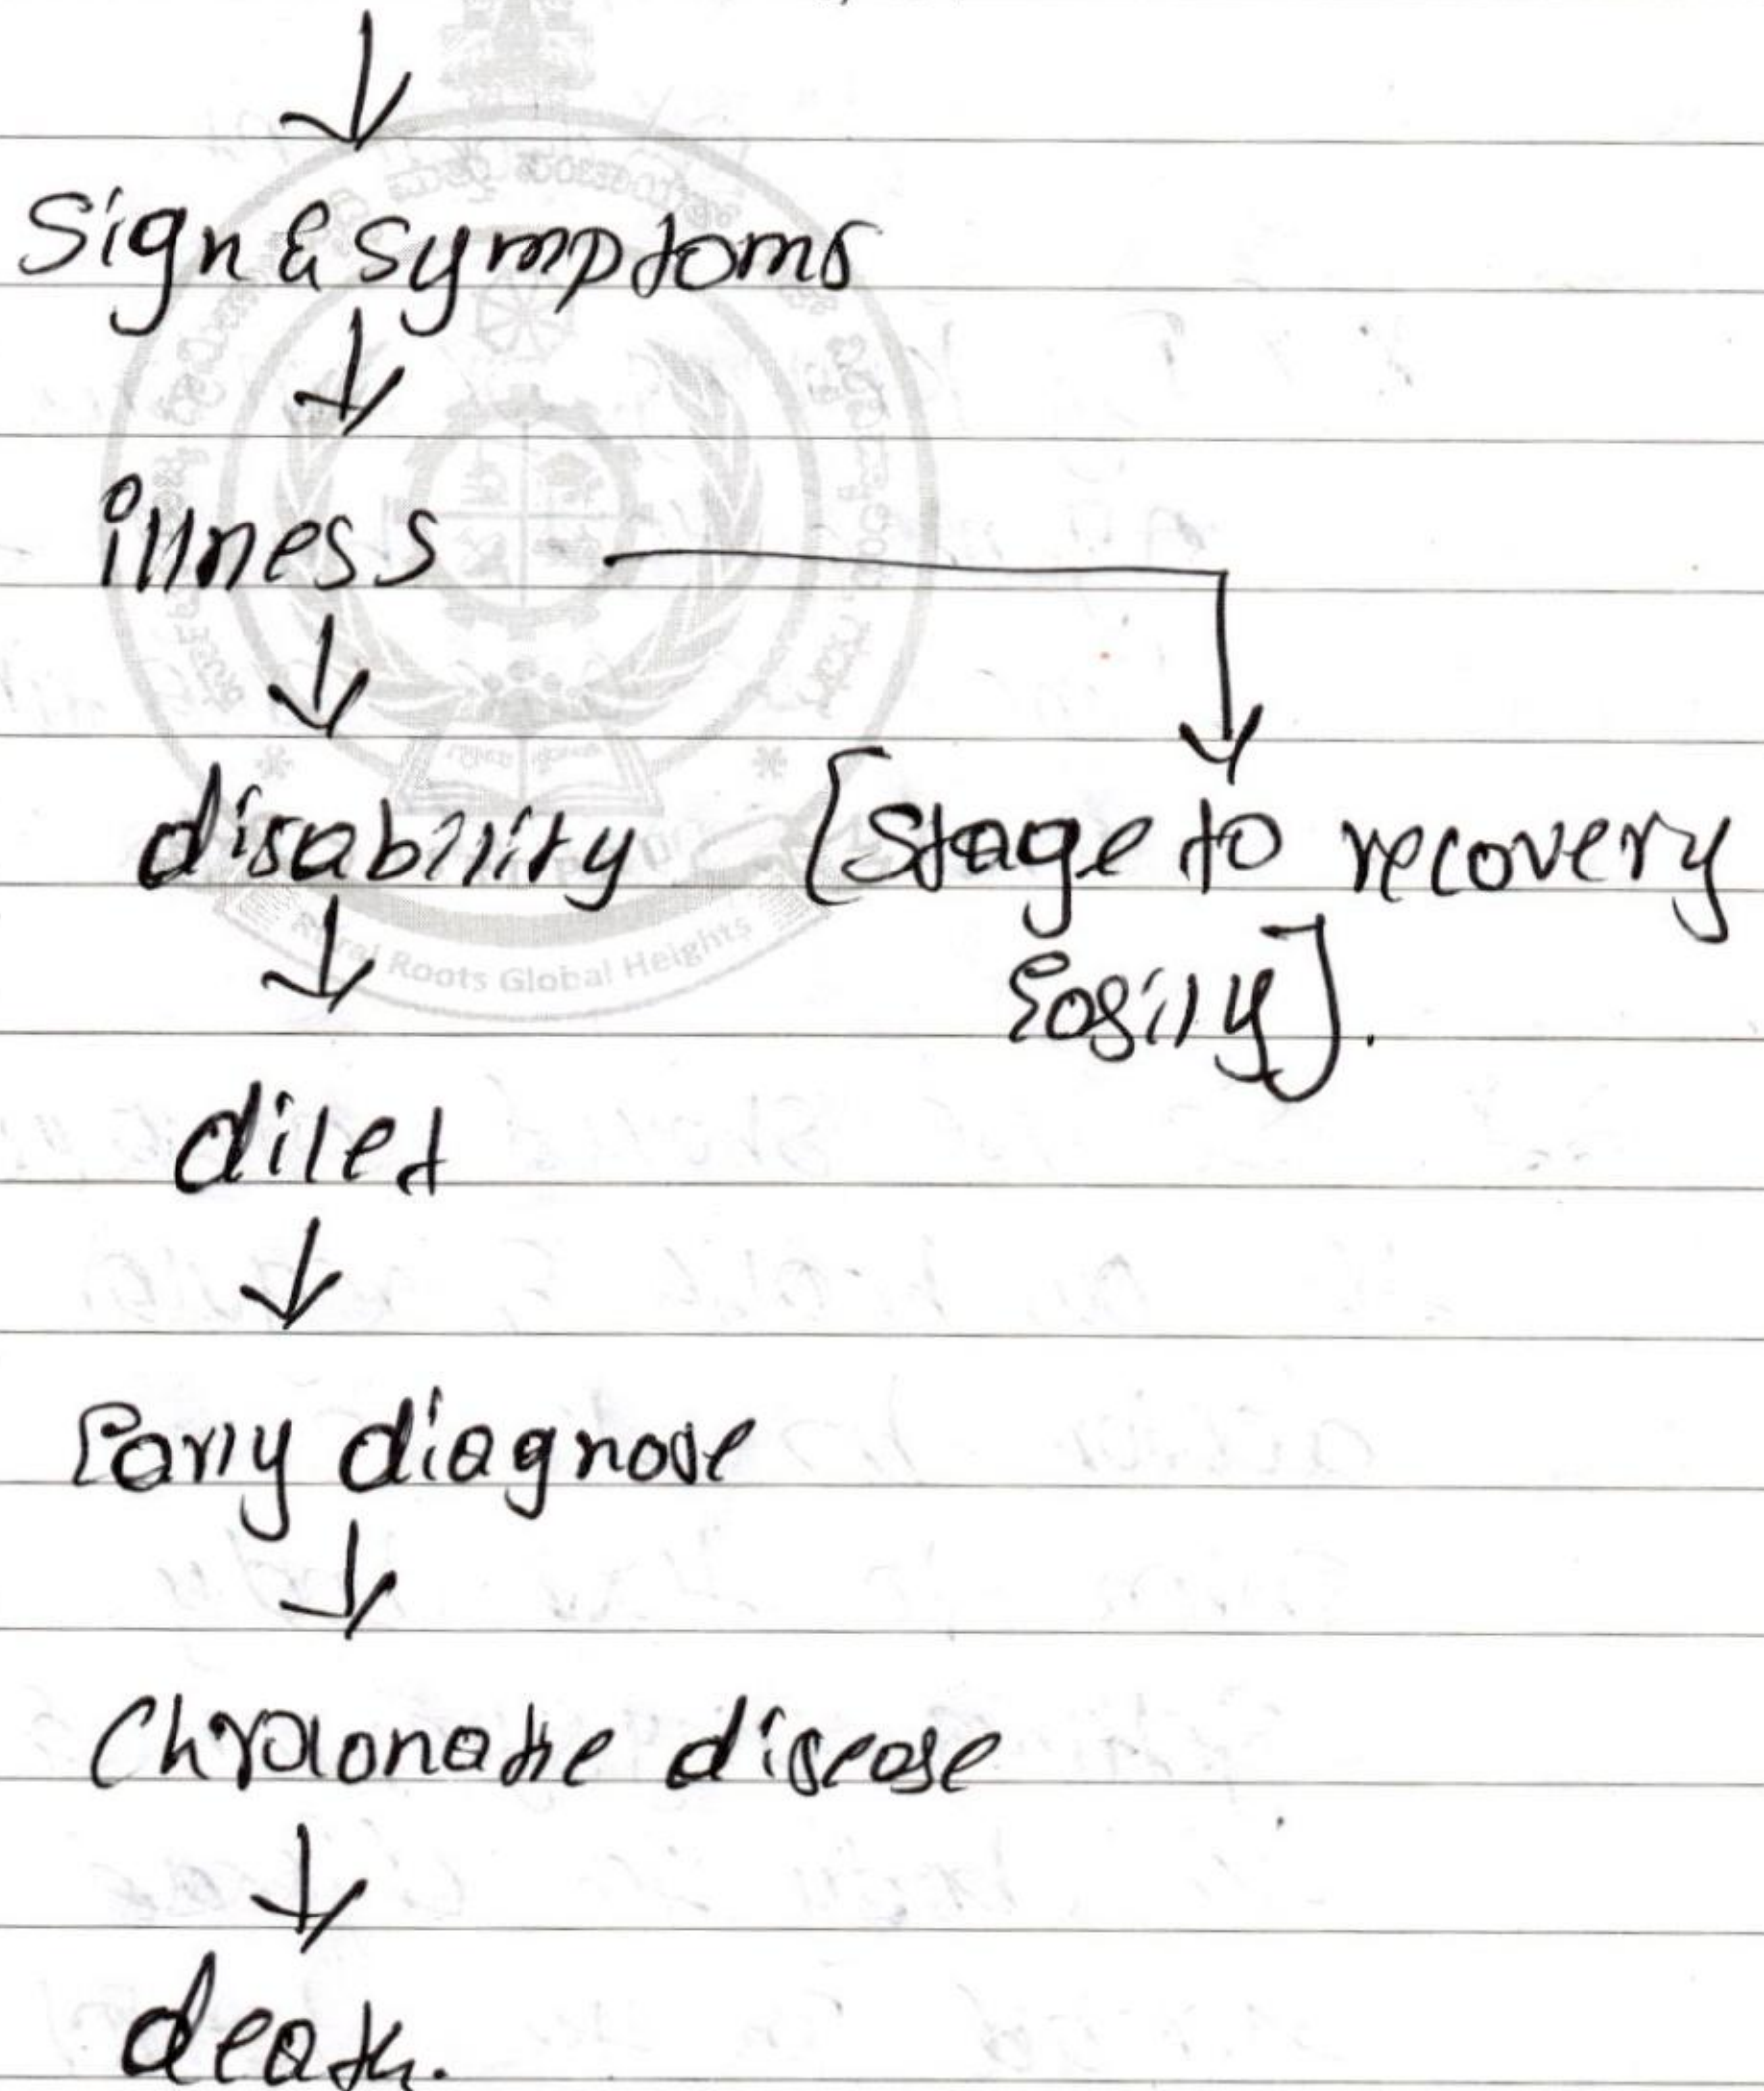

* [By knowing or unknown when the Agent & Host bring them together here we are creating a disease and spreading to environment area].

* So we should always take care of our health & regular checkup to doctor because some Agent has entered to Host body but he didn't get any symptoms & sign but inside the body the disease is going to spread in the host among & get more ill at a single time.

* Pathogenesis

The man who is involved in the disease & move in the environment. how the man get sick or death his life we now to get in this chart.

Clinical horizontal

* This are steps how the man get sickness and death phase in his life.

* levels of prevention

There are 3 types of prevention when the person got disease and 3 levels to recovery chance.

* Primary prevention

* Secondary prevention

* Tertiary prevention.

* In primary prevention the man still full didn't get any disease or symptom & he can feel the sense of his body so then he should take precaution from doctors.

* In secondary prevention the man is addicted to disease and signs & symptoms are getting more in ~~the~~ this stage make early diagnosis & take proper treatment & pre-location to health.

* In tertiary prevention the man got out of control & he didn't take any proper treatment.

-ent & didn't make early diagnosis so there is no chance to keep him alive and can't destroy the disease from his body. he can live with little life by consuming by medicines.

Conclusion: We know to get that in natural history how to identify the disease & how to take pre-location to health & how we should take treatment after getting disease.

(IIA) The steps involved in investigating an epidemic (out break) in the environmental area & how to stop it outbreaking in environmental.

Introduction: We knowing to go that how we can investigate the disease which is outbreak in the environmental & how we going to treat it in which steps we stop that disease which is outbreak in environmental area.

* The First Step we going know that how the disease has spread to the environmental area and from whom it is spreading what is the duration time it take to spread more wide what can we make in that time how to stop it in the particular area.

* The Second Step After knowing that it is spreading by the person then we should take the quarantine ~~the~~ ^{to} person who carries the disease & move around the environment. And spreading the disease everyone so we can't stop the disease to spread in environment.

* The Third Step we should make surveillance area which the person travelled by keep the disease and make surveillance to every home and person and take every one sample testing checkup & if they are suffering from sign & symptom we should make some ~~diato~~ ^{diagnosis} test to confirm the disease present in his body or not.

* The Fourth Step After Surveilling an the place the person who ~~had~~ travelled by keeping disease we should make the area hygienic and keep some sanitation to the area. After everything we should monitor the area and get confirm that there is no any disease present now.

* The Fifth Step We should cure the person who is suffering from the disease by giving proper nutrition food to him and physical fit that again we should make him lab test & diagnose him is still the disease present in his body or not after confirming that the report is normal we should release him from quarantine and give him proper instruction or avoiding the disease.

* The Six Step: We should go and cross check the area where the person spread the disease we should again monitor that area because some time the disease may have chance to get born

- again in the area.

* After this All Step we can stop outbreaking the disease which spread in the environmental area. and keep hygien we of virus spread.

Conclusion: The Step involved in investigating an epidemic outbreak we should take proper precaution to stop spreading the disease in the environmental area and we know that this are highly dangerous disease can't stop but when there is proper educating giving to people or health there is a chance of stopping the disease. in the environmental area.

(8A) The classify epidemiological study designs are Agent, Host & environment & the disease outbreak in the environmental area & how to prevent it how to make eradication of the disease in the environmental area.

* The epidemiological study design there are some study design.

* First are going to study about the disease, Environmental System & mortality & morbidity System.

⇒ In the study if the epidemiological On main contact on 3 forms

* Agent

* Host

* Environment

* Agent to study about the disease how presence in the environment

* Host; The study about how the person got disease and whom it is carrying

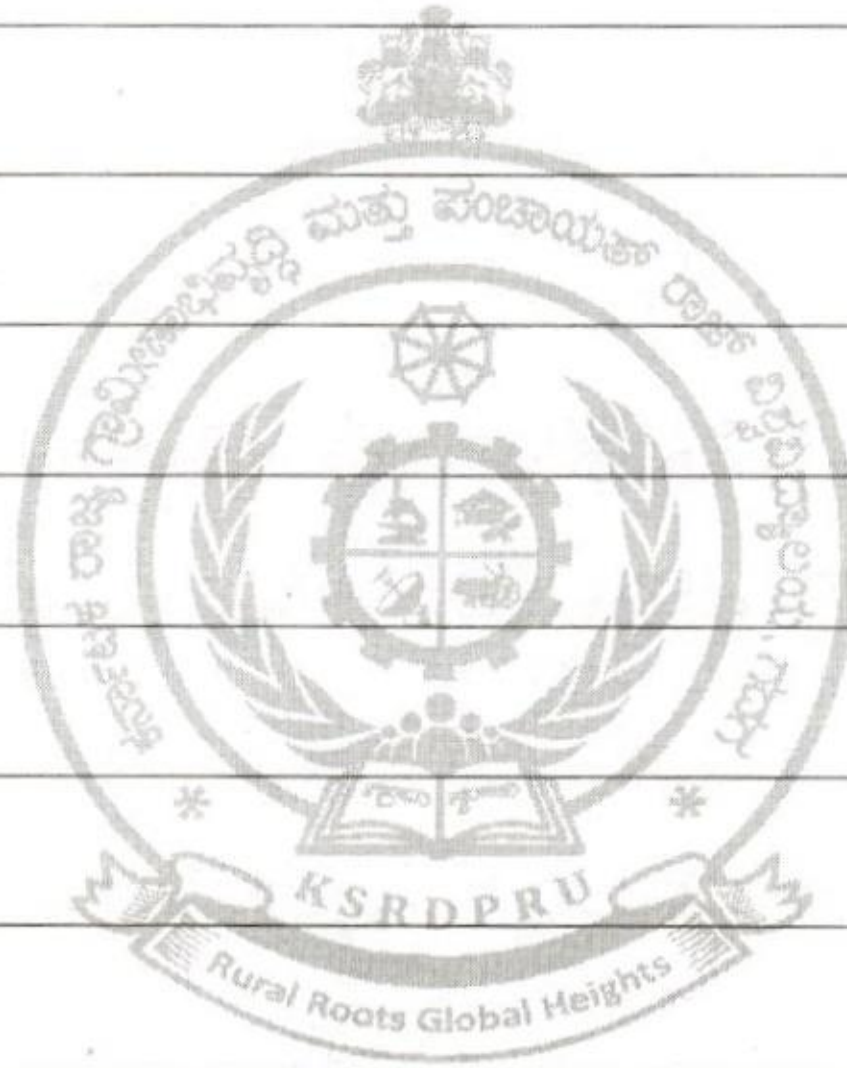

* Environment; When the Agent & Host get close and mix then automatically the disease going to start spread to environment.

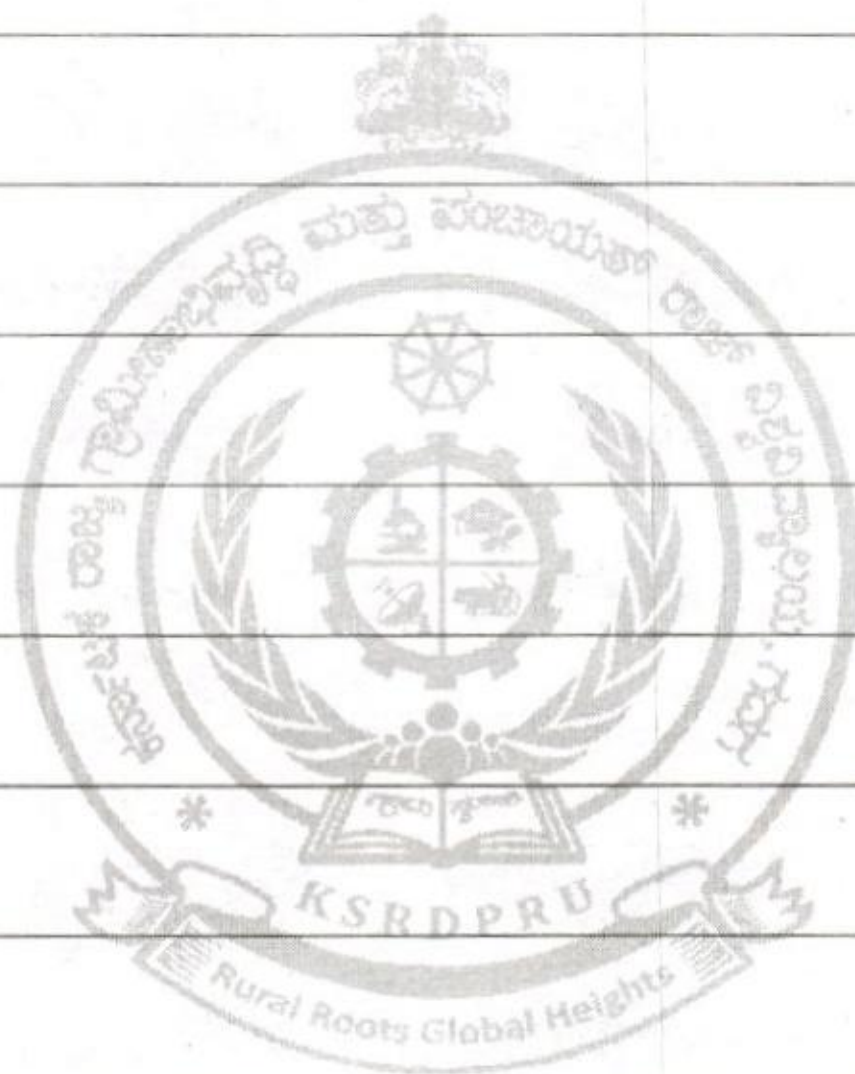

* The Steps conducting case control study

- ⇒ First - we should study the full case of any disease which is spread to the environment. Here we can go to know to stop the disease or virus from our environment.
- ⇒ Second - when we have got to know the disease is spread by this particular person then we should make him sleep separate room & give proper treatment.
- ⇒ When we take the person to quarantine then we should know about which disease it works for which medicine then we can control the disease or case-control.
- ⇒ After making him surrounding surveillance then we should take samples from surrounding people & make lab testing. After confirming we should note that if person normal we can stop surveillance.

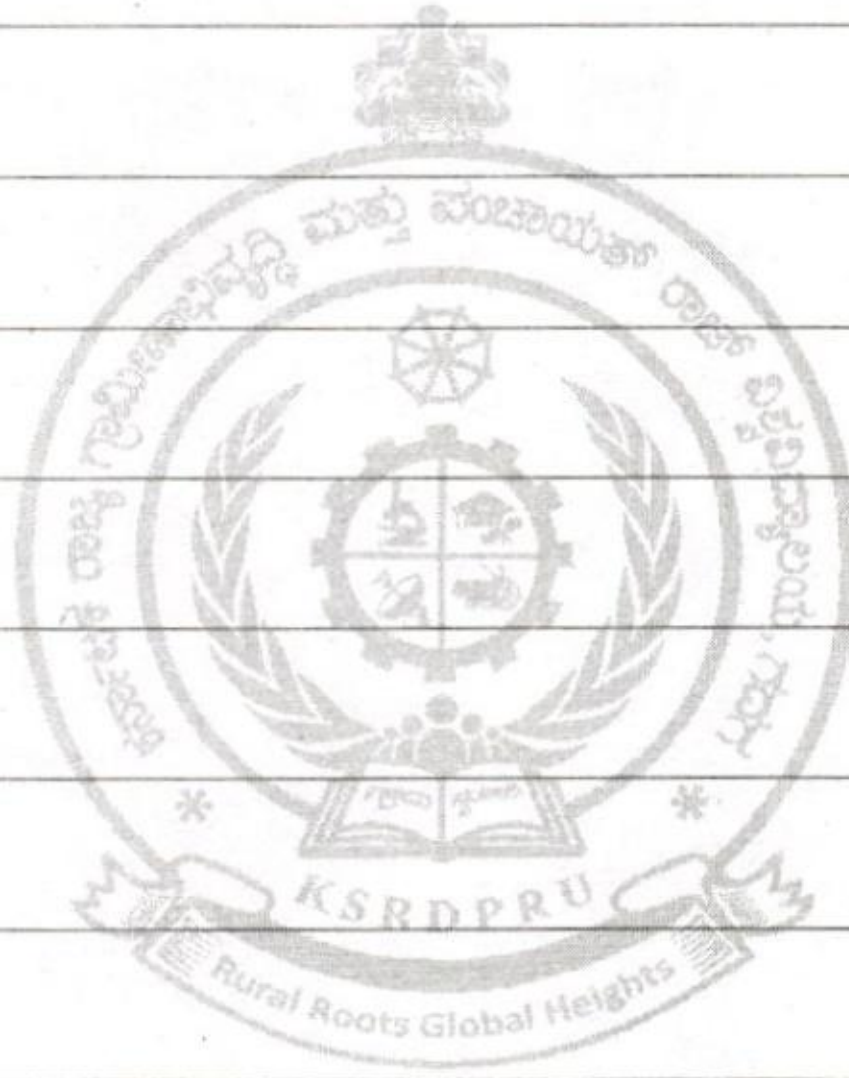

⇒ Then When we have checked the person who is suffering from disease we should make him cure & give proper education & health & again we should check his lab report and if report shows normal then we can send him outside.

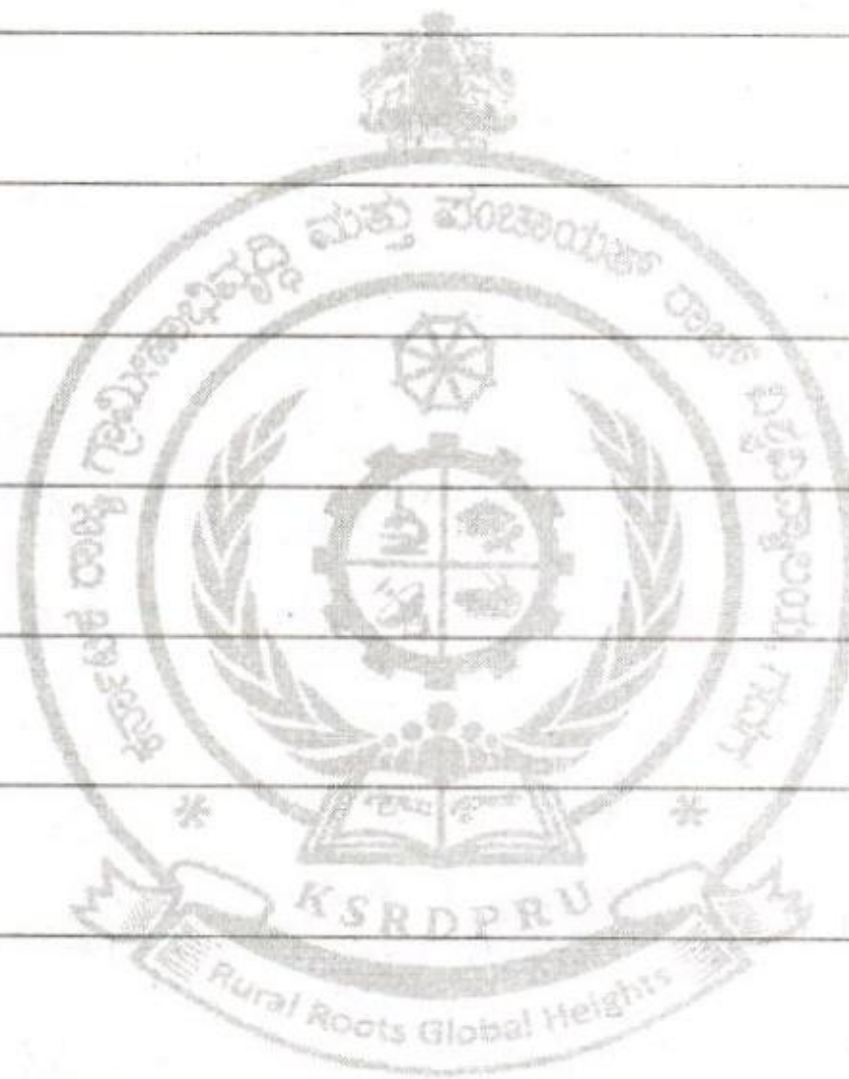

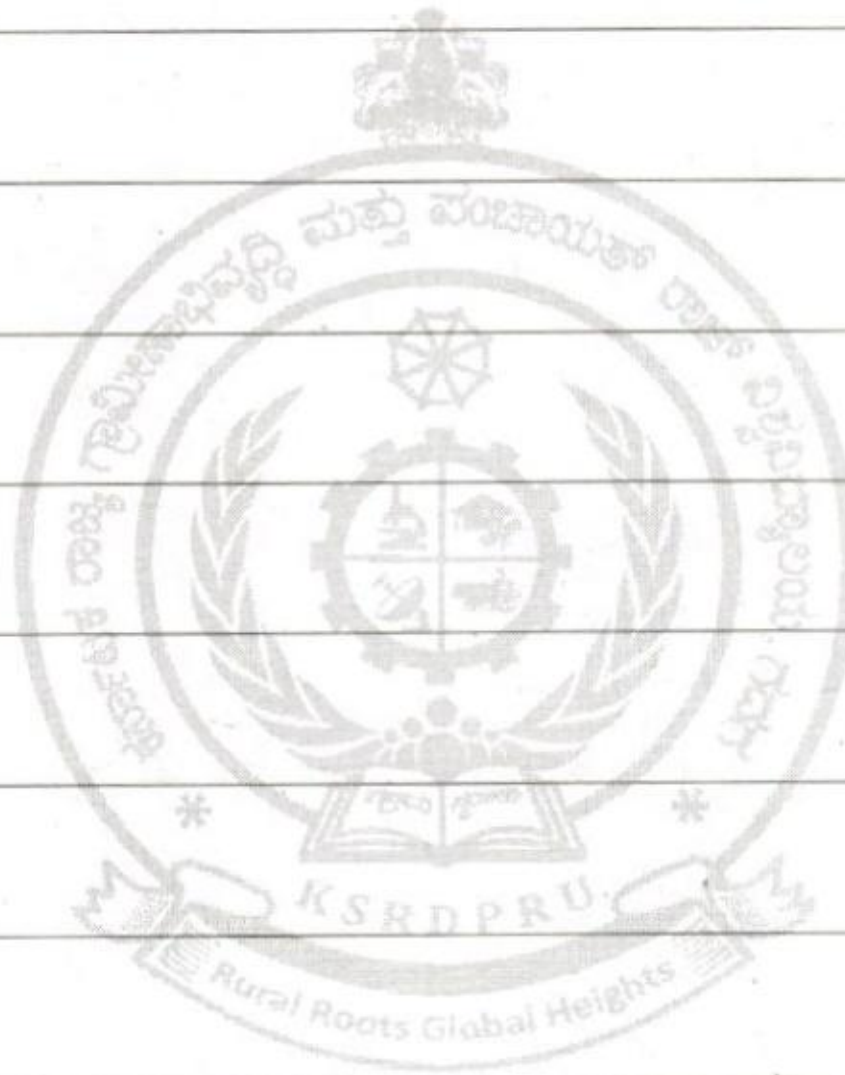

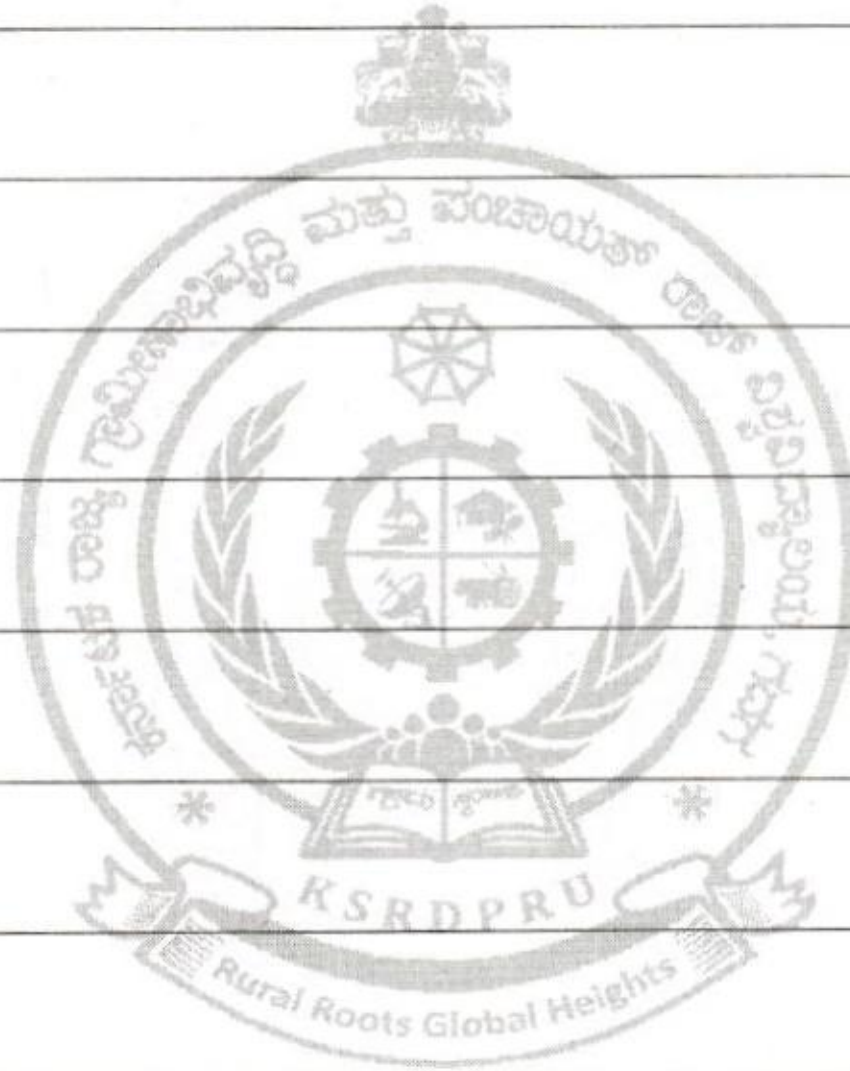

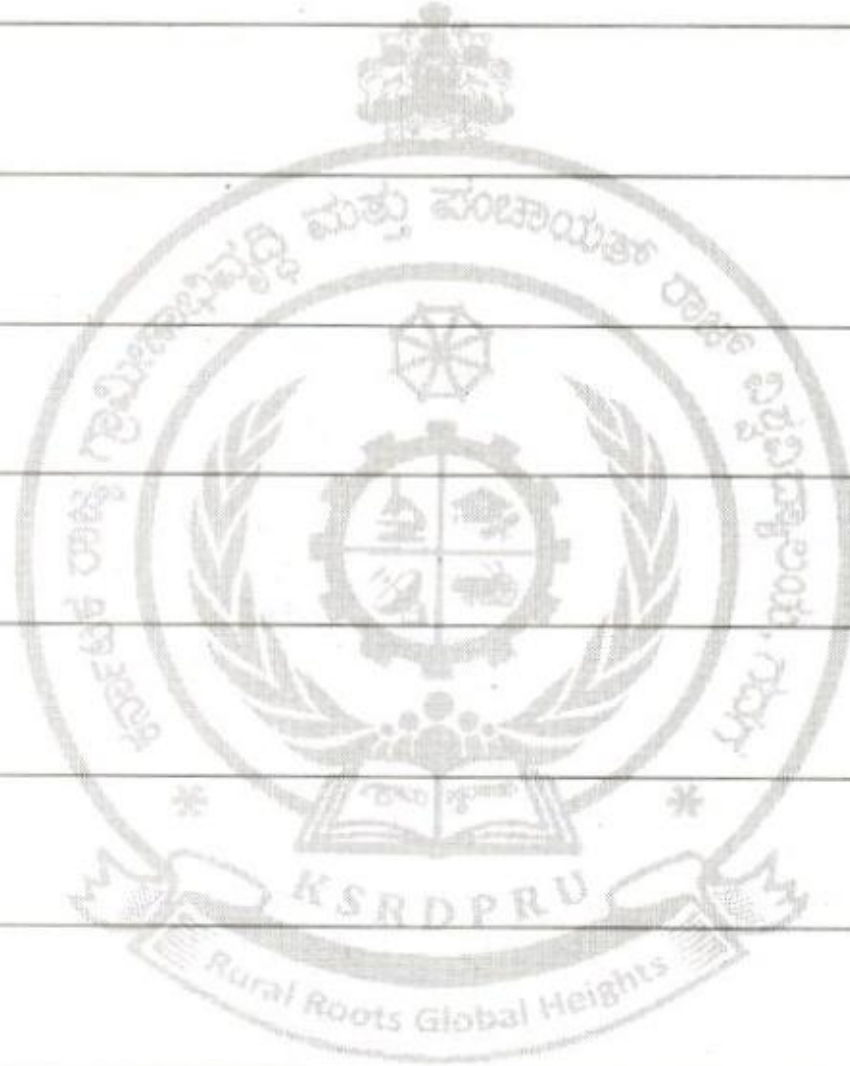

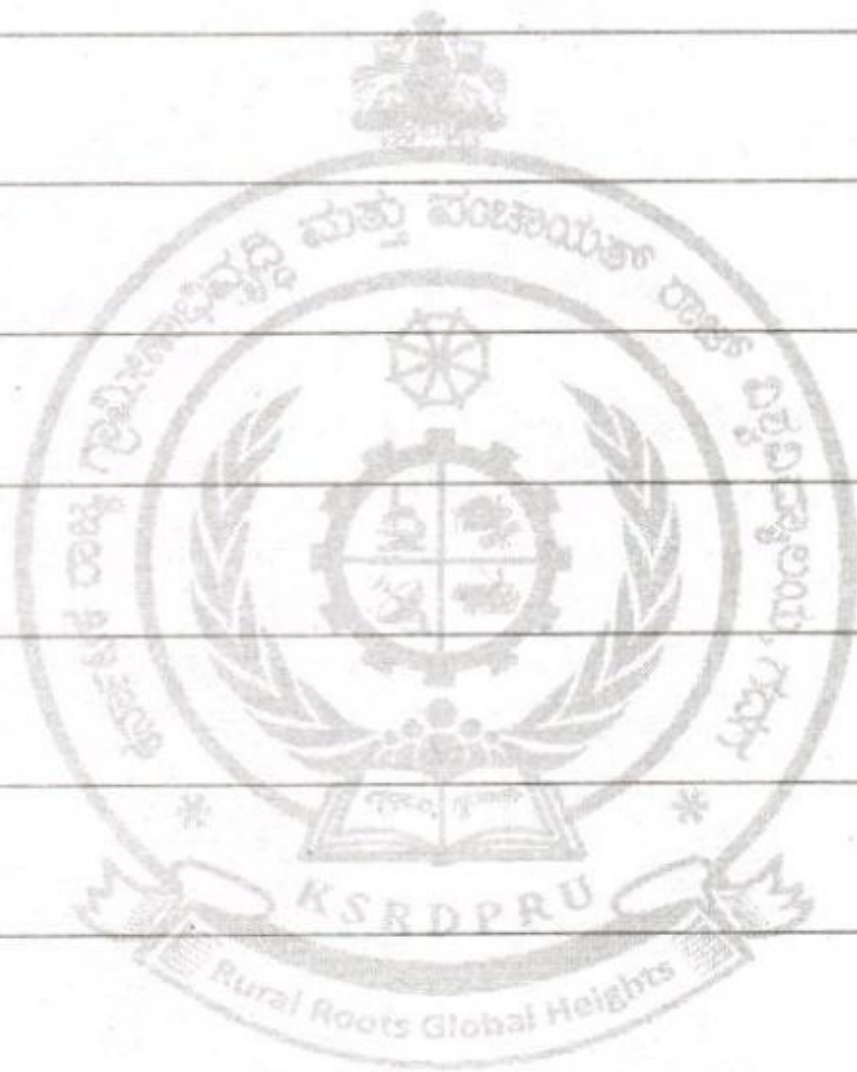

Work Sheet

ಪರೀಕ್ಷಾರ್ಥಿಗಳಿಗೆ ಸೂಚನೆಗಳು

1. ನಿಮಗೆ ಕೊಟ್ಟ ಉತ್ತರ ಪತ್ರಿಕೆಗಿಂತ ಯಾವುದೇ ಹೆಚ್ಚುವರಿ ಪುಟಗಳನ್ನು ಕೊಡಲಾಗುವುದಿಲ್ಲ. ಆದ್ದರಿಂದ ವಿದ್ಯಾರ್ಥಿಗಳು ಉತ್ತರ ಬರೆಯುವಾಗ ಪುಟಗಳ ಸದುಪಯೋಗದ ಬಗ್ಗೆ ಗಮನಿಸಬೇಕು. ವಿದ್ಯಾರ್ಥಿಗಳು ತಮ್ಮ ಸ್ಥಳಾಂಕವನ್ನು ಮೊದಲನೇ ಪುಟದಲ್ಲಿ ತೋರಿಸಿದ ಸ್ಥಳದಲ್ಲಿಯೇ ಬರೆಯತಕ್ಕದ್ದು ಮತ್ತು ಸ್ಥಳಾಂಕವನ್ನಾಗಲೀ ಹೆಸರನ್ನಾಗಲೀ ಬೇರೆ ಯಾವುದೇ ಸ್ಥಳದಲ್ಲಿ ಬರೆದರೆ, ಪರೀಕ್ಷಕರ ಸವಲತ್ತಿಗಾಗಿ ಸೂಚಿಸುತ್ತಿರುವ ಪರಿಗಣಿಸಿ ವಿಶ್ವವಿದ್ಯಾಲಯದ ಕಾಯ್ದೆ (ಪರೀಕ್ಷೆ ಅವ್ಯವಹಾರ ಅಪರಾಧಕ್ಕಾಗಿ) ಯನುಸಾರ ಶಿಕ್ಷೆಗೆ ಗುರಿಪಡಿಸಲಾಗುವುದು.
