Disability Indicators

→ years potential life lost (YPLL)

→ Disability adjust life years (DALYs)

- year Life lost (YLL)

- year live with disability (YLD)

$$YPU = \text{Reference age} - \text{age at death}$$

$$DALYs = YLL - YLD$$

$$YLL = \text{Death} \times (\text{Standardised life Expectancy} - \text{age at death})$$

$$YLD = \text{Incidence} \times \text{duration} \times \text{disability rate}$$

f}

• Incidence:-

It is measure a New ~~case~~
 an infected case in the population

$$\text{Formula} = \frac{\text{Number of the New case in given time}}{\text{Total population}} \times 1000$$

• Prevalance:-

It is measure a new and old case in the population

$$\text{Formula} = \frac{\text{Number of case (new \& old) give time}}{\text{Total population}} \times 1000$$

Cyber

- Endemic:-

It is Normal number of Case in the population

- Epidemic :-

It is suddenly increase of disease and compare to Normal case in the population.

- Pandemic:-

It is disease spread to the multiple countries and increases of Epidemic.

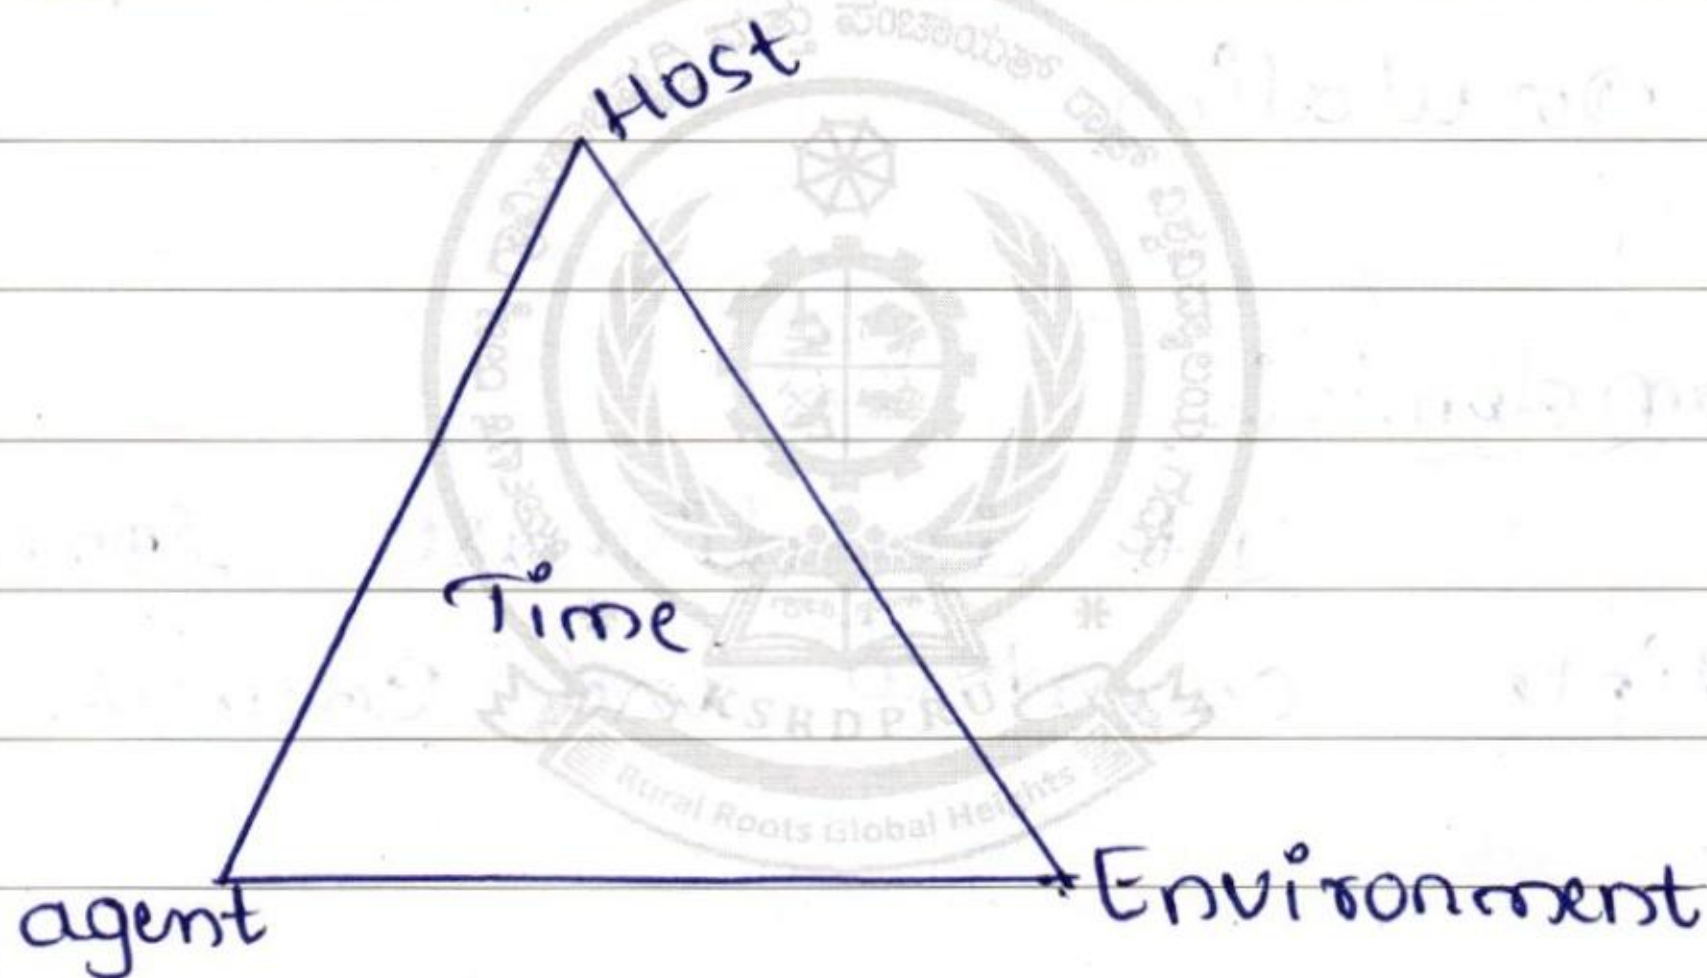

Part - B

2.

Epidemiological triad

→ The relationship between agent Host and Environment.

→ The course studies of health related Events

→ Agent :-

Agent means it carries the disease to host.

Ex :- bacteria, viruses.

Agent factors

- Physical factor
(Heat, cold & other)
- Biological factor
(bacteria, virus)
- Chemical factor
(chemical exposure)
- Social factor
(purity)

→ Host :-

Host means it consists a disease multiplied & live and ~~almost~~ almost all human was host

Ex :- human, animals, birds

Host characteristics

- Demographical characteristics
(Age, sex)
- Biological - Bio chemical characteristics
- Genetic - sex
- Blood → Blood group and other.

→ Environmental :

It is surrounding place to occurs disease like Example
Environment through

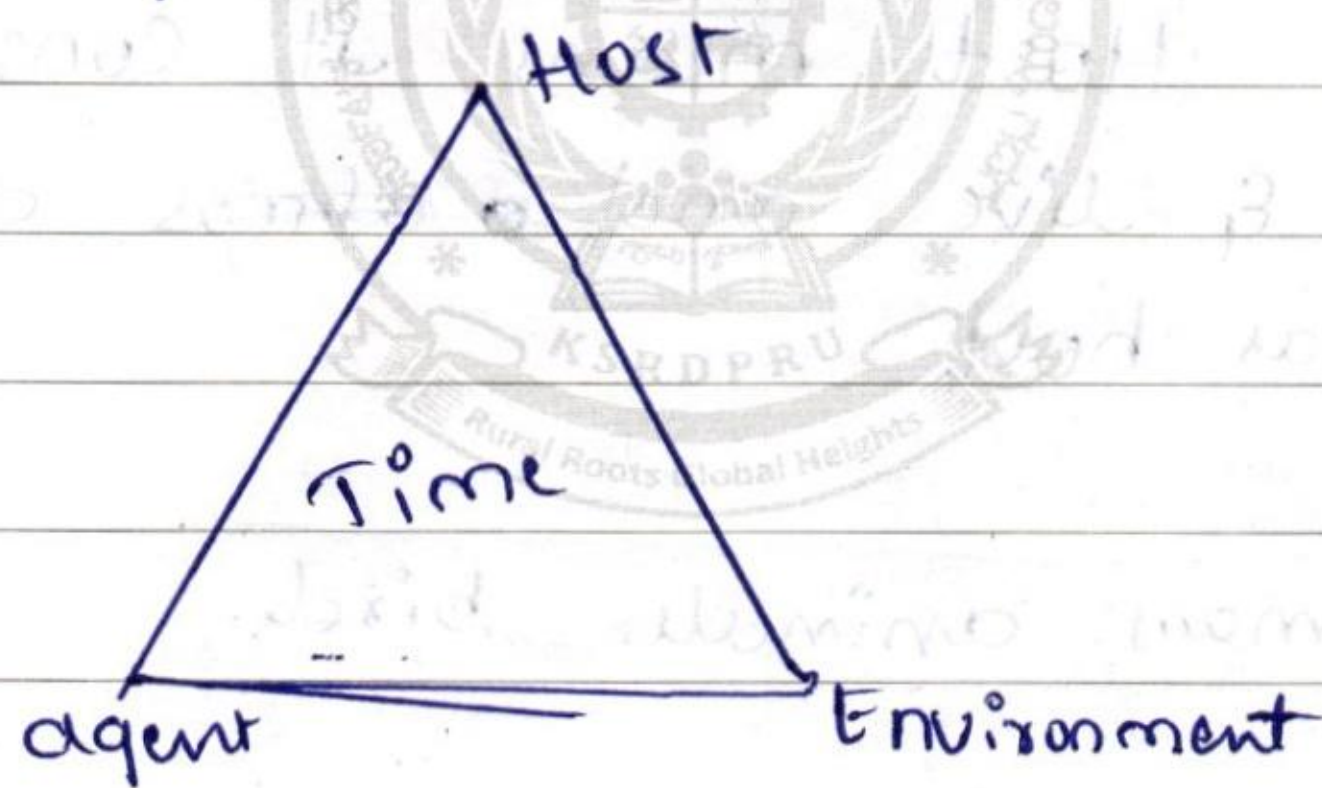

Example : soil, water, climate

Environmental factor

Physical factors

(soil, water climate)

Example for those Epidemiologic triad

▲ Disease - Malaria

Agent → plasmodium

Host → Human, mosquito

Environment → rainy season cold weather and unclean surroundings

Time → Rainy season

3.

Measure of mortality

→ Mortality is to use measure of deaths in specific population in the specific period of time.

$$\text{Formula} = \frac{\text{No of death in given time}}{\text{Mid year population}} \times 1000$$

Measure of mortality are

- Crude death rate
- Specific death rate
- Infant mortality rate
- Maternal mortality rate
- Case fatality Rate

→ Crude death rate

It is used to measure of all cause of death in the population

$$\text{Formula} = \frac{\text{Number of death in the given time}}{\text{Mid year population}} \times 1000$$

→ Specific death rate

It is measure to use deaths ^{on} specific disease in the specific population

$$\text{Formula} = \frac{\text{No of deaths (specific disease) give time}}{\text{Mid year population}} \times 1000$$

→ Infant Mortality rate

It used to measure the age of 0-1 years child death occurs in specific ~~pop~~ population

$$\text{Formula} = \frac{\text{Number of death in (0-1 years) given time}}{\text{Total ~~population~~ mid year population}} \times 1000$$

→ Maternal Mortality Rate

It is used to measure maternal mother deaths in the specific population

$$\text{Formula} = \frac{\text{Number of death of maternal mother}}{\text{Mid year population}} \times 1000$$

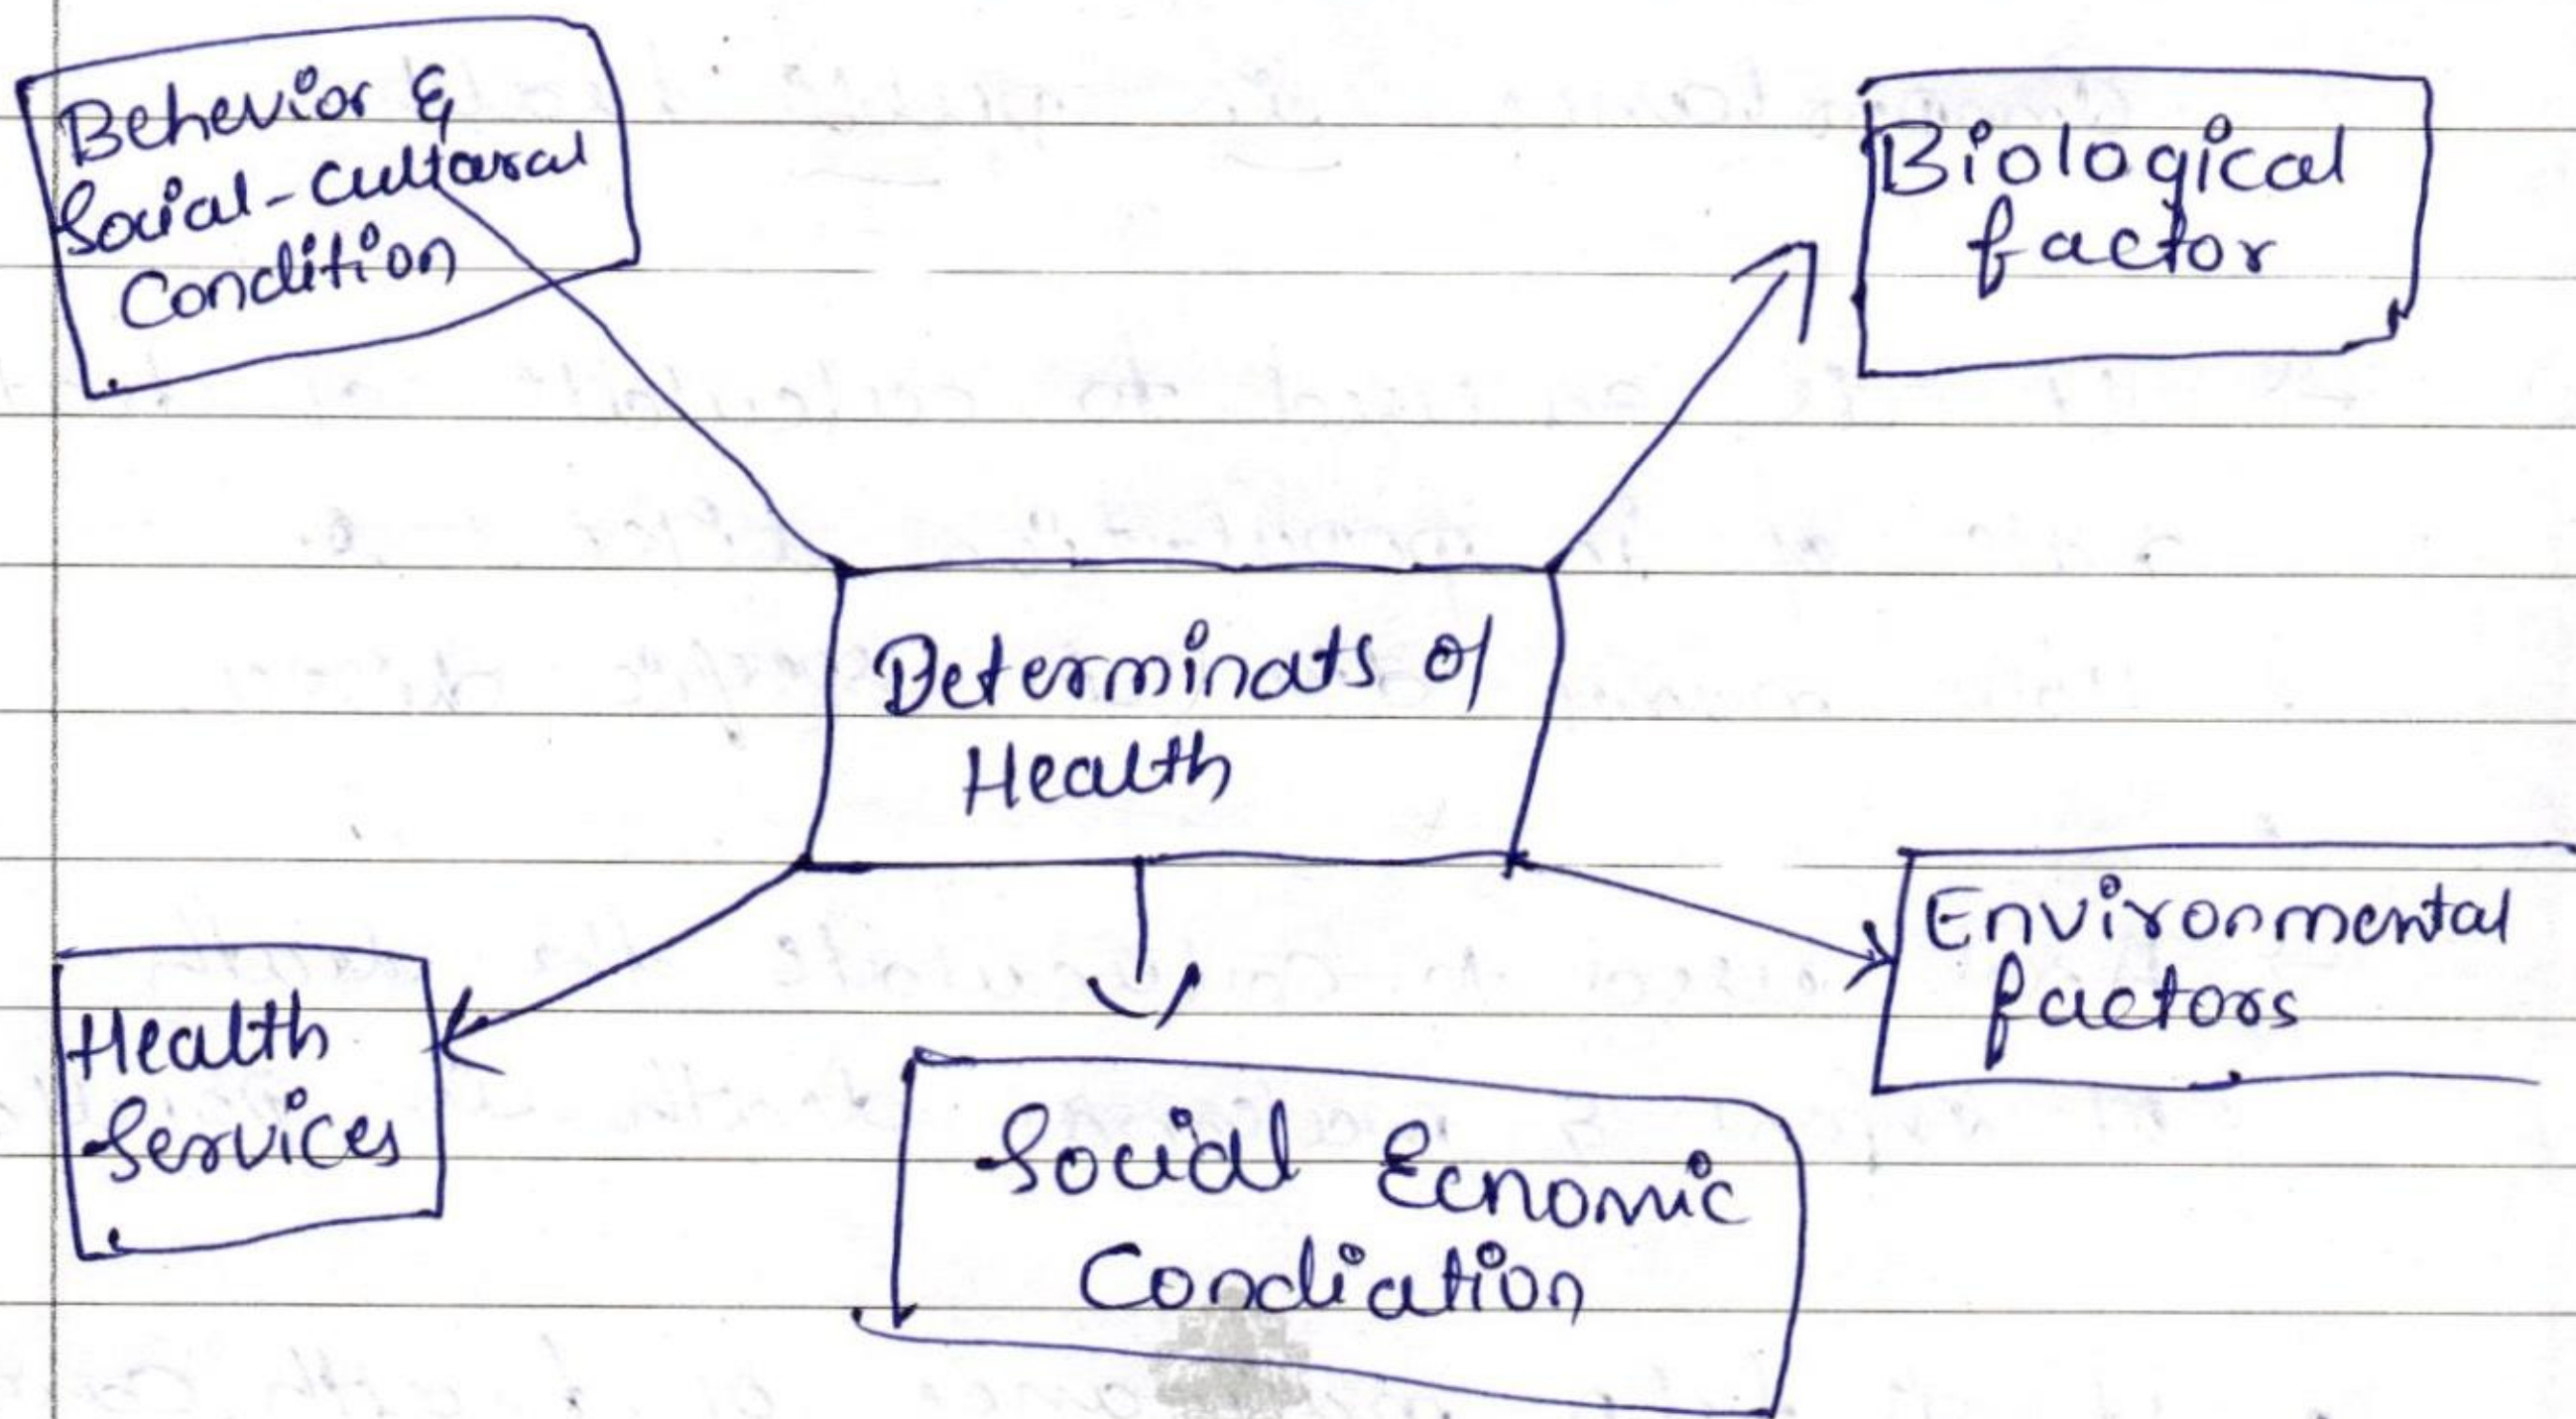

Importance in public health

- It is used to calculate of death rate of in population like.
 - How many die in specific diseases
- And used to calculate the death of Infant & maternal death in population
- It is help maintenance of health care facility.

4.

Determinants of health

- Determinants as the factor that is influence the health like ~~physical~~ . Biological , social - Economical and other factor.

Determinants of health

• Biological factor

It is factors influence the health like

Genetic :- that means the parents are suffering from any disease like diabetes and children also suffer in future

age :- it means age increase then the disease also occurs

• Environmental factor:

This factor influenced the health & Environmentally like water pollution, air pollution and other

~~Ex~~ - physical → water, air.

• Behavior and Social - Cultural Cond ition

→ Depend on Economical Status
(Rich or Poor)

→ Cultural Value
(veg or non-veg)

→ Social value
(women status)

→ Person habits
(Smoking, Drinking)

→ Behavior Patterns
(High risk behaviour)

◦ health service

- access of primary health care centers and hospital
- Needed medical service
- Ambulance service for any time
- Doctor facilities
- ~~To make a road~~

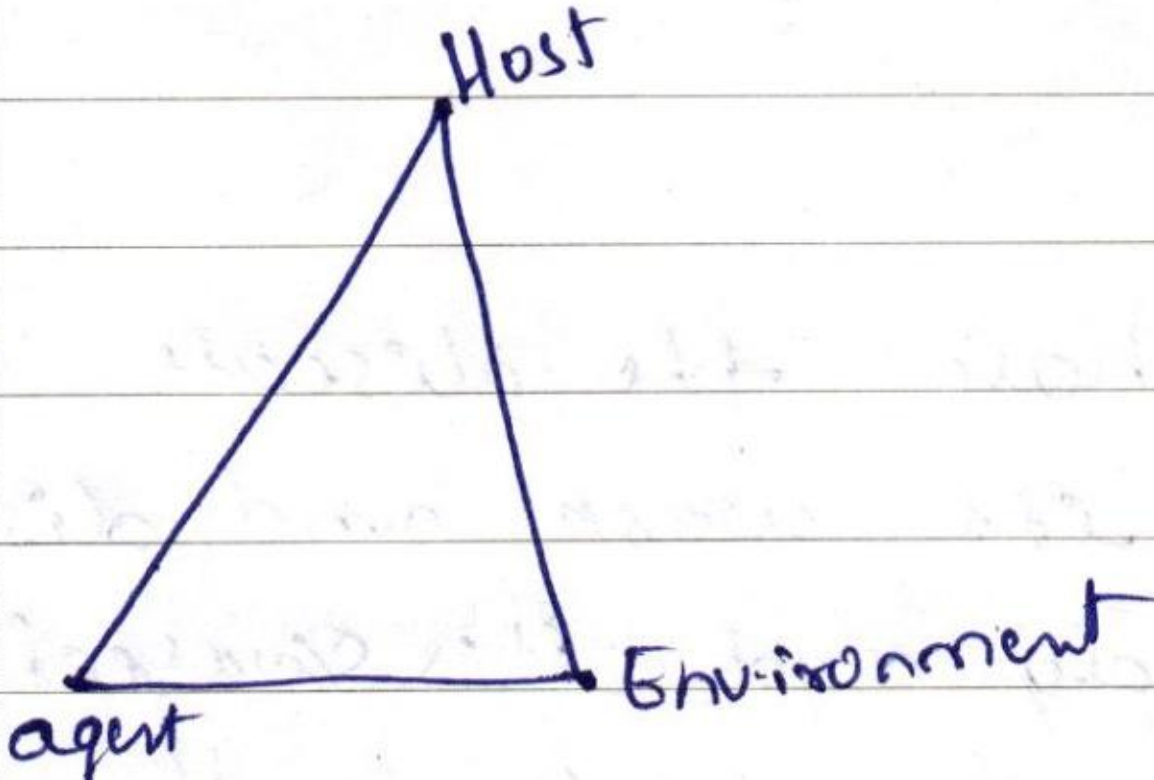

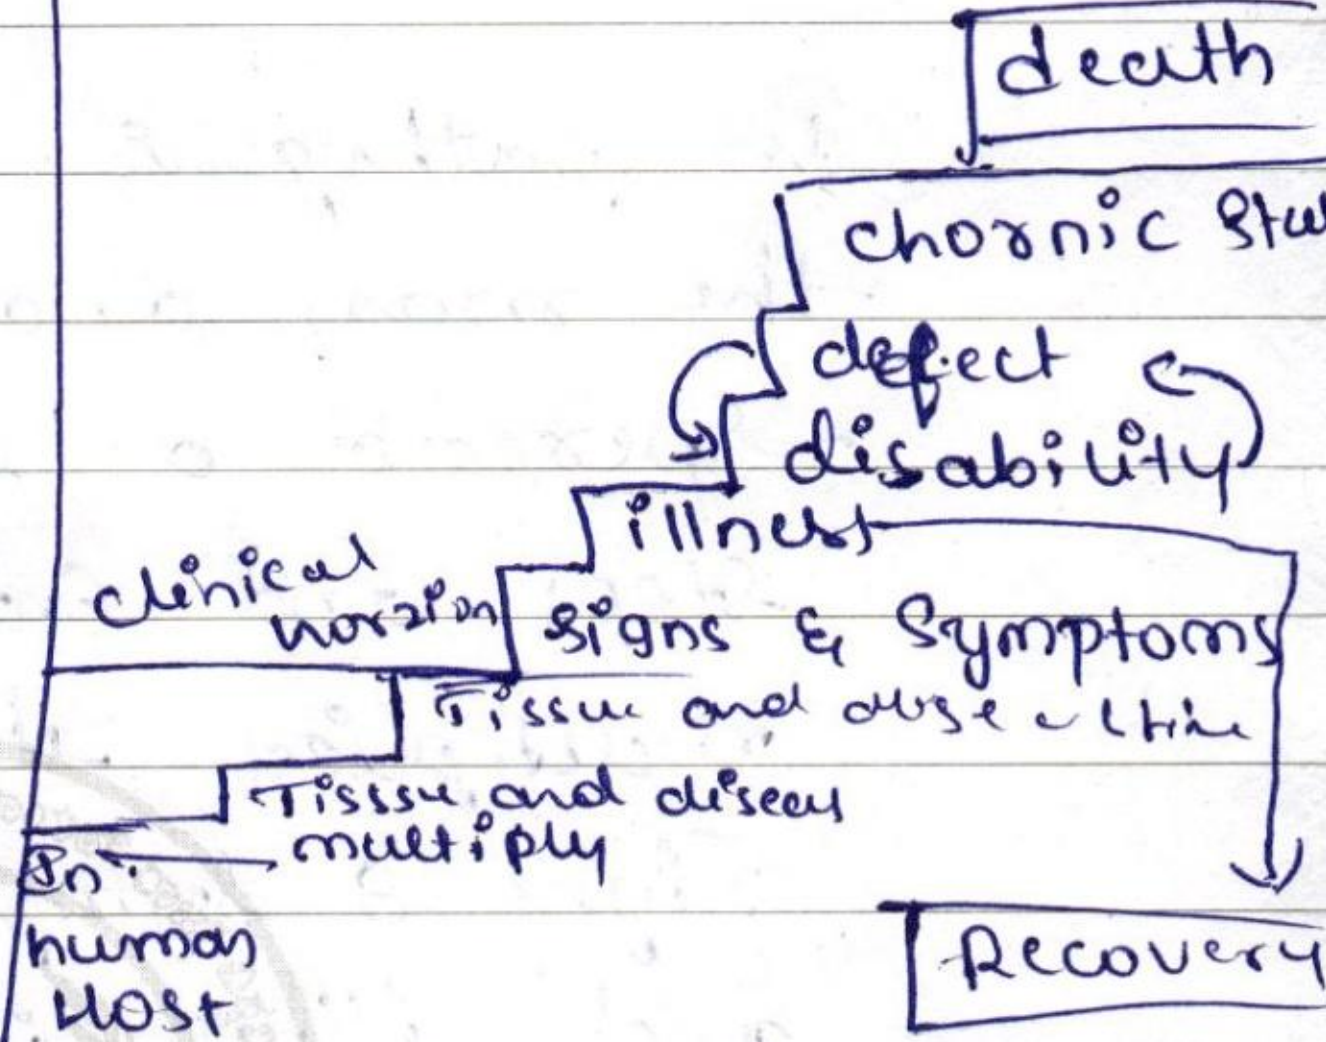

Part - C

12.

Natural history of disease.

- The natural history of disease mean the disease history of pathogenic and prepathogenic status how it cause the human body and human how it suffer disease ~~cause~~ infected and how cure the disease.

29889

Period of prepathogenic	period of pathogen
→ before man involved  Bringing agent & host together produced the disease and provided a stimulus	→ The course of disease in man.  In this period seen disability, Recovery or death

Primary prevention	Secondary prevention	Tertiary prevention
Sanitation, Hygiene primary	Early diagnosis & treatment	disability & rehabilitation Care

In the prepathogenic of period disease does not occur in the man and this period disease produced with help of host & agent or together produced the disease.

and provoked the stimulus and it is contains preve Prim are prevent-ion and Sanitary . primary health major.

In pathogenic phase the disease Enter the man and its work and disease -spread a body and it's caused steps and Enter the body and multiplied it self and slowly seen signs & symptoms in the body and illness in the time Recovery apostum-inty is more and disability and the stage man defect and the This stage man suffering from The defect and next stage was disability and in the stage man was diseal it suffer-ing disability and it temporary or permantely and The Infected man was death.

levels of Prevention

1. primordial prevention
2. primary prevention
3. secondary prevention
4. tertiary prevention

→ primordial prevention

The disease or infection occurs before it takes a preventive life. ~~don't~~ No smoking. No drinking. daily Exercise to Eat healthy food.

→ Primary prevention

In this prevention the man quit smoking and quit alcohol consumption. and eat healthy diet and life style change.

→ Secondary prevention

In this prevention to major di. Early diagnosis the disease and take treatment for the disease and cure

→ Tertiary prevention

In this prevention disease already spread body and that person suffering from a disability and the cure from rehabilitation centre.

9.

Health Indicators

→ Mortality

→ Morbidity

→ disability

→ Nutrient health status

→ health care delivery

- utilizing the health care services and other.

→ Mortality:-

It is used to measure the death rate in the specific population

① Types of Mortality

- Crude death rate
- Specific death rate
- Infant Mortality rate
- Maternal Mortality rate

It is used to measure the & how many death occurs in the given population

→ Morbidity

It is a measure to calculate the how many people new suffering from disease and old case calculation

Measures of Mortality

- Incidence
- Prevalence.

It is used to how many people suffering from disability and people life lost from disability & death.

measure of disability

→ Year potential life lost [YPLL]

→ Disability adjust life years (DALY)

- Year of life lost [YLL]

- ^{Year} ~~Disability~~ live with disability [YLD]

→ Nutritional Health status

It is used to calculate the nutrient status in children to measure like head circumference mid-arm circumference and to tools to measure and also to measure pregnancy women's nutritional health status.

29889

→ health case delivery indicator

It is used to help and calculate the need perspective to give Antenatal Care (ANC) & postnatal care (PNC) from the government side.

→ utilizing the health care services

It is used to measure the how many people utilizing the government health care service and this calculation, changing the service & improving the health care facilities.

★ IMR → Infant Mortality Rate

It is used to calculate the death occurs in the age of 0 to 1 years children to ~~com~~ per 1000 population in children.

$$\text{Formula} = \frac{\text{No of death of (0-1 children)}}{\text{Mid year population of children in the year}} \times 1000$$

★ MMR - maternal Mortality Rate

It is used to measure the deaths of ~~pre~~in menstrual time (ANC & PNC) time and its used as

$$\text{Formula} = \frac{\text{No of deaths of mother in given time}}{\text{Mid year population of } \text{pre} \text{ maternal mother. this during Time period}} \times 1000$$

Part - A

dx

risk factors

★ risk factor is dx

→ risk factor is a provoking the disease to severe stage

Example :-
 Smoking
 Drinking
 unhealthy diet
 Obesity
 Drug abusing

Part - C

8.

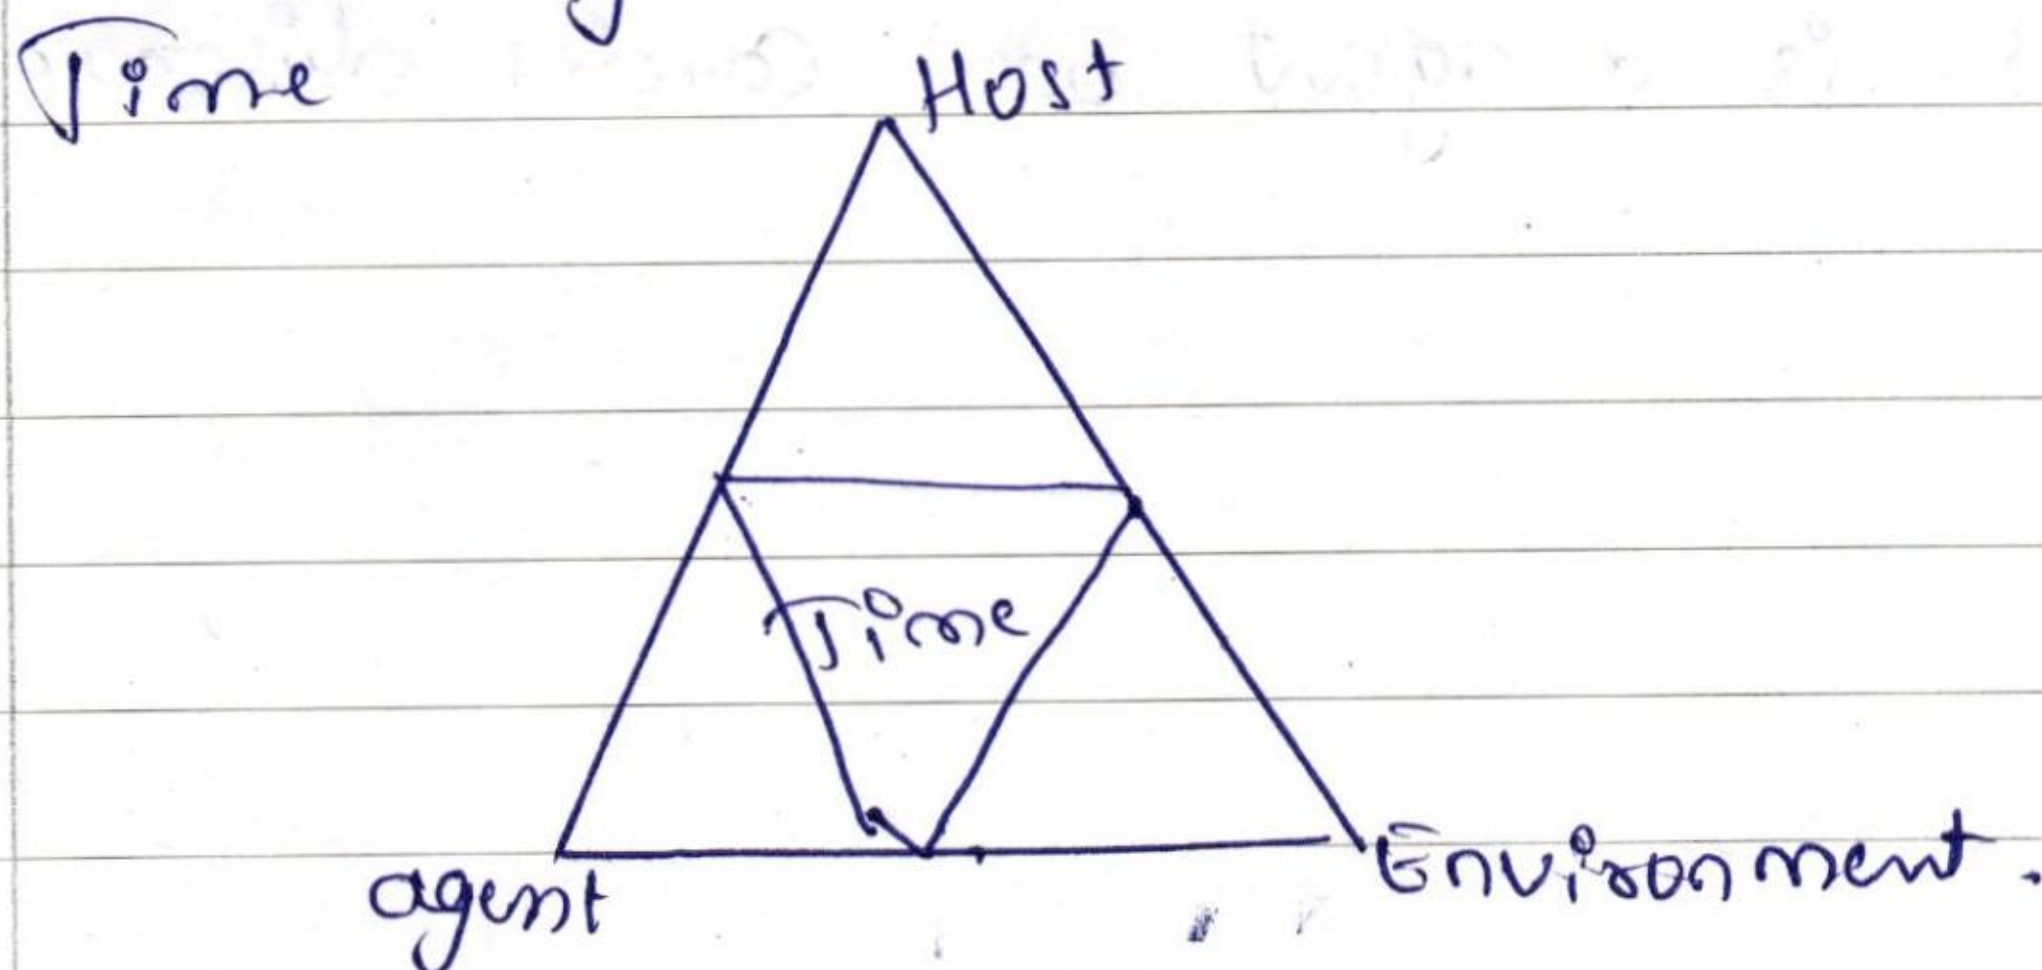

Epidemiological study

→ Epidemiology.

It is a study of distribution & determinants of study health related events in the population and it's applicable to the preventing the health problems in the population.

→ And Epidemiological study designs

→ Epidemiological study ~~is~~ was depend on Epidemiological triad, and part like agent, host, Environment, &

• And its classified the Epidemiologic
-al triad

→ Agent it is carrier of disease
to host

Agent factors like

Physical factor

(Heat, cold)

Biological factor

(bacteria, virus)

chemical factor

(chemical exposure)

Social factor

(Poverty)

→ Host ?

It is consists a ~~host~~ disease lives & multiplies in the host and almost time human is a host

Characteristics

Demographic Characteristics like age. sex

Biological characteristics like

genetic. sex

Biochemical characteristics like

Blood, Blood group

Environment

It is surrounding place to occurs disease like through soil, water, climate

Factor

Physical factor soil. Contaminated soil, water. is to effect the occurs the disease.

And steps in conducting Case - Control Study

→ First surveillance the in the
Community and

1 Identify the disease in the
Community and

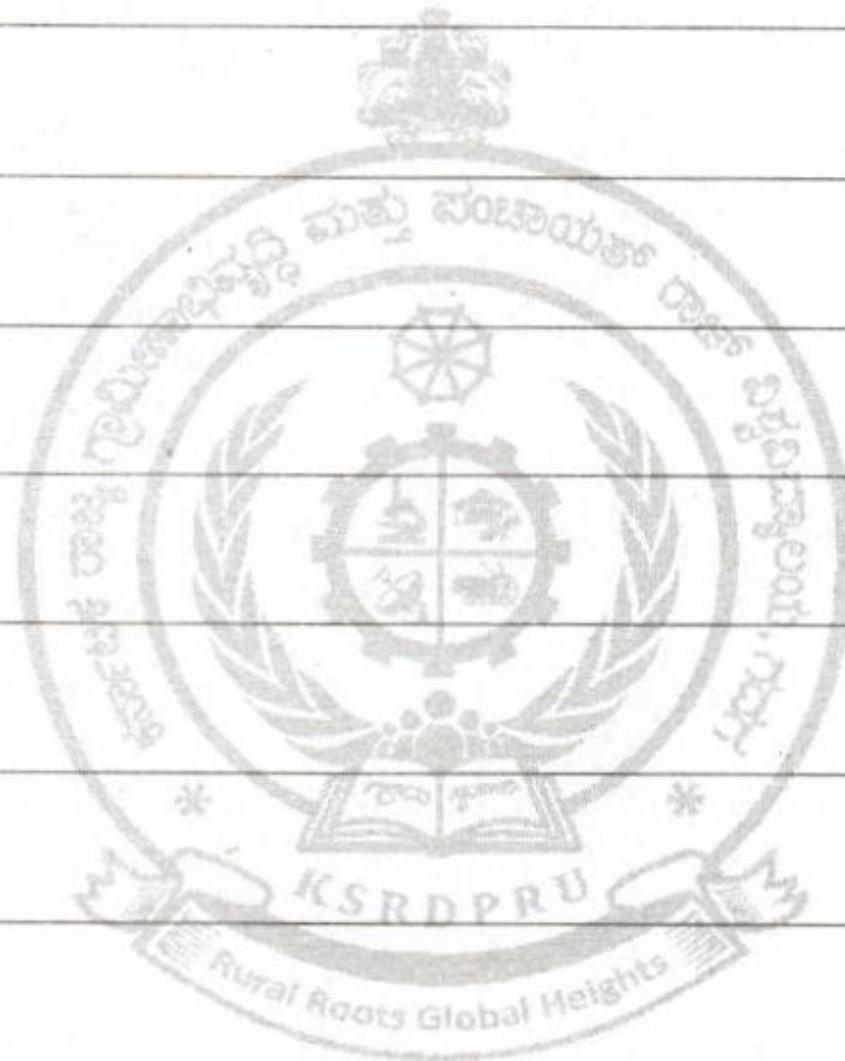

2 Research about the disease and
make vaccination for this
disease

3 And the disease was spread
to to provide health Education and
health care services and give know-
ledge of preventive major.

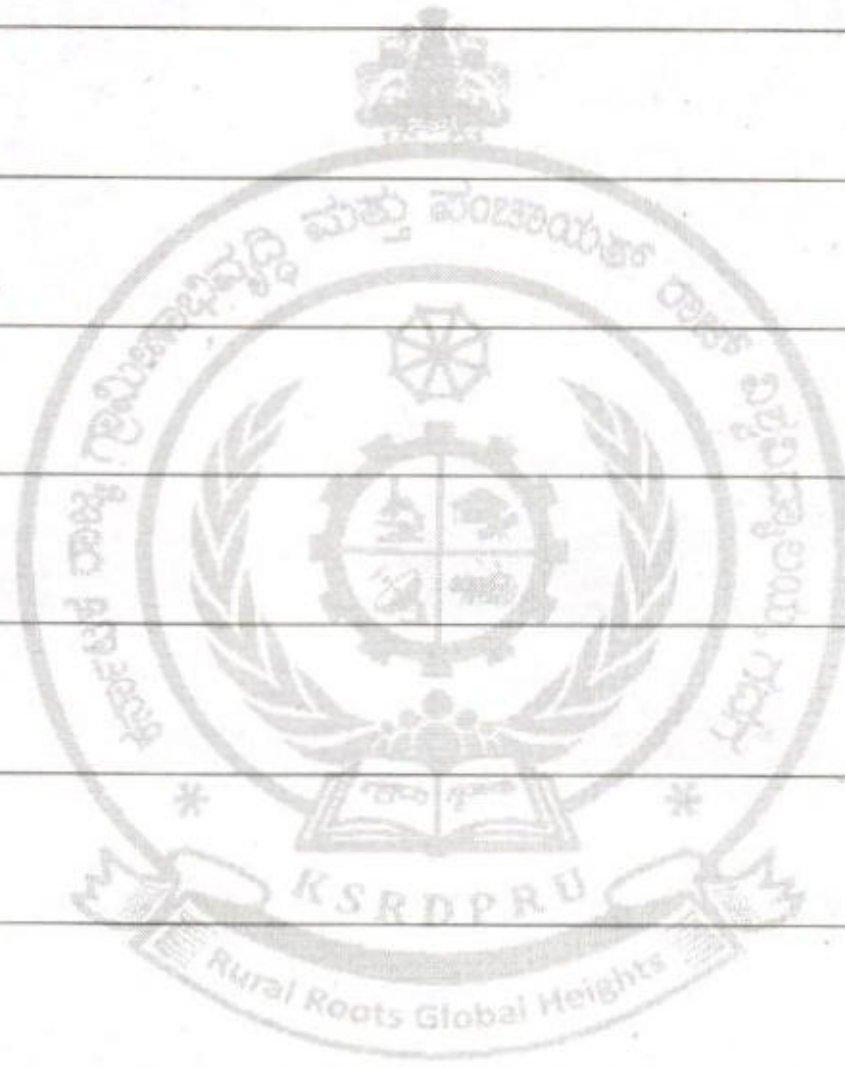

4 disease study. In Research
Epidemiologist studies the disease
history and their symptoms and
